Mathematics And Logo:

Learning Mathematics and Logo Celia Hoyles, Richard Noss, 1992 These original essays summarize a decade of fruitful research and curriculum development using the LISP derived language Logo They discuss a range of issues in the areas of curriculum learning and mathematics illustrating the ways in which Logo continues to provide a rich learning environment one that allows pupil autonomy within challenging mathematical settings Essays in the first section discuss the link between Logo and the school mathematics curriculum focusing on the ways in which pupils Logo activities relate to and are influenced by the ideas they encounter in the context of school algebra and geometry In the second section the contributions take up pedagogical styles and strategies They tackle such cognitive and metacognitive questions as What range of learning styles can the Logo setting accommodate How can teachers make sense of pupils preferred strategies And how can teachers help students to reflect on the strategies they are using Returning to the mathematical structures essays in the third section consider a variety of mathematical ideas drawing connections between mathematics and computing and showing the ways in which constructing Logo programs helps or does not help to illuminate the underlying mathematics

Elliott,Thomas R. Kratochwill,2013-12-16 The provision of early childhood educational and psychological services has been an area of considerable growth over the past 25 years As a result of far reaching trends in both public policy and clinical practices there is a growing need for professionals appropriately trained to address the assessment and intervention issues involved in early childhood programming To take advantage of current opportunities for extending their role and to meet the challenge of early childhood service delivery school psychologists must expand their professional skills and broaden their knowledge base With the publication of this volume the Advances in School Psychology Series changes to adopt a specific thematic focus and include reviews directly related to a common theme This volume studies the subject of early childhood education and treatment directions The chapters address a range of specific topics and research representing advances in the field of early childhood services for school psychology allowing school psychologists to examine and integrate current information from multiple perspectives educational and

sociological as well as psychological Topics that collectively represent important developments for school psychology include current early childhood education program models preschool handicapped children parental involvement peers and socialization stress and coping and computers and young children To date more efforts have been directed toward devising and validating instruments that predict failure or success among preschoolers than on designing and evaluating approaches for treating them Although assessment is critical for meeting individual needs the primary emphasis of this volume is on fostering cognitive academic social and emotional growth of young children Computers and Mathematics David Alexander Smith,1988

partial differential equation an overview sciencedirect topics - Mar 30 2022

web as a simple example of a partial differential equation arising in the physical sciences we consider the case of a vibrating string we assume that the string is a long very slender body of elastic material that is flexible because of its extreme thinness and is tightly stretched between the points $x = 0$ and $x = l$ on the x axis of the $x y$ plane let x be any
