Macroeconomic Policy Modelling For Developing Countries:

Macroeconomic Policy Modelling for Developing Countries Victor Murinde, 1993 How can developing countries design a macroeconomic policy framework that will reverse the current trend of persistent inflation regressive real growth and foreign exchange bottlenecks One plausible answer emerges from an intersection between the dilemma and a novel analytical approach In this book Victor Murinde develops one novel approach by drawing on the first principles of economic theory to construct a macroeconomic model such that the structural features and bottlenecks of a developing country are integrally incorporated The model is small and congruent with the limited available data but it is comprehensive enough to address the key policy instruments and targets A battery of modern econometric techniques are called upon to estimate and test the model on Kenya Tanzania and Uganda since independence in a country specific as well as cross country spirit Policy experiments are performed to highlight the macroeconomic scenario generated each time a policy instrument or a stabilization policy package is implemented The experiments fully demonstrate the practicability of the small model limited data methodology developed in the book

Mallick, 2018-08-13 First published in 1999 this influential volume explores Macroeconomic Adjustment with a particular focus on India Its inspiration originated from the introduction of stabilisation and structural adjustment policies in India in 1991 Mallick

examines the application of this policy package by the International Monetary Fund and the World Bank to Developing Economies First looking at the initial conditions and generators of imbalances the appropriate policy framework for India s initial conditions and structural characteristics is considered While the effectiveness of the IMF had been strongly criticised Mallick explains how it could be used more effectively He argues that the programs applied are often contradictory and using India as an example examines the effects of policy reform on its trade sector the repercussions on the direct economy and the costs associated with such policies in restoring stability and future economic growth with particular support for the Vector Autoregression VAR framework Mallick forwards a new structural model for policy purposes evaluated for overall performance and optimal control

development of a family of models for diverse policy choices focusing on the ways to model the following links between tradable and non tradable activities labor markets and portfolio choices given limited capital mobility Selected essays are all inspired by specific policy problems including the adaptation to external shocks i e oil consequences of capital inflows determinants of migration and associated remittances the productivity of foreign aid and rent seeking activities under trade regimes with non price trade restrictions Examples in this book lay out the theoretical foundations alongside a variety of applications to help formulate coherent and transparent models for policy analysis Archetype economies are extensively used to show how differences in economic structure influence the effects of policies Graduate students and policy analysts interested in modeling will find this a useful compendium of studies
