

Force & Motion

Force is the energy it takes to do work. When you push or pull an object, it takes energy to get that object to move. Motion is the change in position an object experiences because of a force applied.

Push

A force to move something away from you.

Pull

A force to move something closer to you.

Gravity

A force that brings objects toward the earth. When an apple falls off a tree, gravity is the reason it hits the ground.

Friction

A force that slows or stops motion when two objects rub together.

Magnetism

A force that attracts or repels objects. Opposite poles attract and like poles repel. Magnets attract iron, nickel, and cobalt.

Acceleration

The ability for an object to gain speed in a short amount of time. As the ball rolls down the hill, it will continue to gain speed.
