 addresses a central problem in psychology Why does an animal s behavior fluctuate in the face of an unaltered environment
 In a sense this is the opposite of the question from which work on motivation began and for which Claude Bernard invented
 the concept of the fixity of the internal milieu How does an animal maintain constancy in the face of a fluctuating
 environment Dealing with motivation has become extremely complex as new experiments phenomena and theories have
 extended the concept This book embodies some of the ways in which work on motivation is currently proceeding One of the
 major changes has been the recognition that motivation cannot be explained without an understanding of the biological
 rhythms and activational systems that underlie behavior Another is that ecological and evolutionary perspectives add
 enormously to answering the central problem of why an animal does what it does when it does The book suffers from several
 omissions There is no chapter on the development of motivated behavior There is none on reward systems in the brain owing
 to the untimely death of James Olds whose contribution would have enriched this book appreciably and to whom we dedicate
