## **Ofdm Based Broadband Wireless Networks Design And Optimization:**

OFDM-Based Broadband Wireless Networks Hui Liu, Guoqing Li, 2005-11-08 OFDM based Broadband Wireless Networks covers the latest technological advances in digital broadcasting wireless LAN and mobile networks to achieve high spectral efficiency and to meet peak requirements for multimedia traffic The book emphasizes the OFDM modem air interface medium access control MAC radio link protocols and radio network planning An Instructor Support FTP site is available from the Wiley editorial department

**Radio Communications** Alessandro Bazzi, 2010-04-01 In the last decades the restless evolution of information and communication technologies ICT brought to a deep transformation of our habits The growth of the Internet and the advances in hardware and software implementations modified our way to communicate and to share information In this book an overview of the major issues faced today by researchers in the field of radio communications is given through 35 high quality chapters written by specialists working in universities and research centers all over the world Various aspects will be deeply discussed channel modeling beamforming multiple antennas cooperative networks opportunistic scheduling advanced admission control handover management systems performance assessment routing issues in mobility conditions localization web security Advanced techniques for the radio resource management will be discussed both in single and multiple radio technologies either in infrastructure mesh or ad hoc networks

**Distributed Medium Access Control in Wireless Networks** Ping Wang, Weihua Zhuang, 2013-03-23 This brief investigates distributed medium access control MAC with QoS provisioning for both single and multi hop wireless networks including wireless local area networks WLANs wireless ad hoc networks and wireless mesh networks For WLANs an efficient MAC scheme and a call admission control algorithm are presented to provide guaranteed QoS for voice traffic and at the same time increase the voice capacity significantly compared with the current WLAN standard In addition a novel token based scheduling scheme is proposed to provide great flexibility and facility to the network service provider for service class management Also proposed is a novel busy tone based distributed MAC scheme for wireless ad hoc networks and a collision free MAC scheme for wireless mesh networks respectively taking the different network characteristics into consideration The proposed schemes enhance the QoS provisioning capability to real time traffic and at the same time significantly improve the system throughput and fairness performance for data traffic as compared with the most popular IEEE 802.11 MAC scheme

**Computing Algorithms with Applications in Engineering** V. K. Giri, Nishchal K. Verma, R. K. Patel, V. P. Singh, 2020-03-02 This book collects high quality research papers presented at the International Conference on Computing Applications in Electrical Electronics Engineering held at Rajkiya Engineering College Sonbhadra India on August 30-31 2019 It provides novel contributions in computational intelligence together with valuable reference material for future research The topics covered include big data analytics IoT and smart infrastructures machine learning artificial intelligence and deep learning crowd sourcing and social intelligence natural language processing business intelligence high performance computing wireless
