## **Pulse An Ada Based Distributed Operating System:**

PULSE, an Ada-based Distributed Operating System D. Keefe, 1985      *A Review of Ada Tasking* Alan Burns, Andrew M. Lister, Andrew J. Wellings, 1987-06-24 Ada is unquestionably one of the most significant programming languages to emerge in the last decade The manner of its inception and support by the US Department of Defense DoD ensures that it will be used extensively for the indefinite future in programming large and complex systems The growing availability of compilers means that many organisations are already committed to using the language for sizable and significant applications As a perhaps inevitable result of its design goals Ada is a large language It has Pascal like control and type constructs a mechanism for exception handling a package structure for information hiding decomposition and separate compilation facilities for low level programming and a tasking model of concurrency It is perhaps this last area that has generated most debate criticism and disagreement The purpose of this book is to review the tasking model in the light of the extensive analysis and comment which has appeared in the literature The review is necessarily wide ranging including discussion of Ada as a general purpose concurrent programming language Ada as a language for embedded and distributed systems implementation issues with particular reference to distributed systems formal semantics specification and verification proposed language modifications By consolidating this discussion within the confines of a single review potential users of the tasking facility are enabled to familiarise themselves with all the factors which may impinge upon the performance reliability and correctness of their software The book also provides a focus for any debate on modifications to the Ada language or developments from it

*Maintenance of Knowledge-based Systems* Frans Coenen, Trevor J. M. Bench-Capon, 1993 The practical take up of Knowledge Based Systems KBSs is usually described as disappointing One explanation of the reluctance of organisations to make a real commitment to these systems stems from the lack of well defined techniques to engineer them in an acceptable manner Without the assurance of quality that can be given by the use of a proven methodology the risk of investing substantially in these systems will remain a risk too great to be taken One of the chief manifestations of the lack of these techniques is that it is impossible to say with any assurance that it will be possible to maintain the systems so that their useful life can be extended This book is concerned with the maintenance of KBSs providing a balance between the academic and the practical and containing analysis of tools developed in a research project The intention of the book is to move from very general concerns available to all systems through to specific techniques and tools designed to address particular problems in particular representations before concluding with some more general remarks This book is essential reading for anyone whether in a commercial or academic environment who wishes to build a serious Knowledge Based System that will continue to be used over a period of time

**SPECIAL FEATURES** Building a Knowledge Based System is not the end of the story the system must be used and during its period of use the knowledge on which it relies will change and develop A Knowledge Based System that is not to become rapidly obsolete must change and develop with it This book addresses this neglected area of maintenance emphasising the specific maintenance tasks required by a Knowledge Based System The book provides a balance between the academic and the practical and containing analysis of tools developed in a research project
