Problem 1

The numbers of weekly sales calls by a sample of 30 salespersons are listed below.

14	9	6	12	21	4	9	3	24	17
9	5	8	16	16	3	17	19	16	15
5	20	17	14	19	7	18	15	18	8

    a. Construct a relative frequency histogram for the data, using 6 class intervals and the value 0 as the lower limit of the 1st class, the value 24 as the upper limit of the 6th class?

    b. What proportions of the total area under the histogram fall between 12 and 20?

Problem 2

The finance director of a hardware wholesaler has asked the accountant to ring each customer five days before their account payment is due, as a means of reducing the number of late payments. As a result of time constraints, however, only 60% of customers receive such a call from the accountant. Of the customers called, 90% pay on time, while only 50% of those who do not called pay on time. The company has just received a payment on time from a customer; what is the probability that the accountant called this customer? Hint: use probability tree.

Problem 3

How much money does a typical family of four spend at a McDonald's restaurant per visit? The amount is a normally distributed random variable with a mean of $16.40 and a standard deviation is $2.75.

    a. Find the probability that a family of four spends less than $10.

    b. What is the amount spent at McDonald's by less than 10% of families?

Problem 4

Venture capital firms provide financing for small, high-risk enterprises that have the potential to become highly profitable. A successful venture-capital firm notes that it provides financing for only 10% of the proposals it reviews. Of the 200 proposals submitted this year, what is the probability that more than 30 will receive financing? Hint: use normal approximation to the binomial distribution.
