Brown,Marion I. Walter,2014-01-14 As a result of the editors collaborative teaching at Harvard in the late 1960s they produced a ground breaking work *The Art Of Problem Posing* which related problem posing strategies to the already popular activity of problem solving It took the concept of problem posing and created strategies for engaging in that activity as a central theme in mathematics education Based in part upon that work and also upon a number of articles by its authors other members of the mathematics education community began to apply and expand upon their ideas This collection of thirty readings is a testimony to the power of the ideas that originally appeared In addition to reproducing relevant materials the editors of this book of readings have included a considerable amount of interpretive text which places the articles in the context of problem solving While the preponderance of essays focus upon mathematics and mathematics education some of them point to the relevance of problem posing to other fields such as biology or psychology In the interpretive text that accompanies each chapter they indicate how ideas expressed for one audience may be revisited or transformed in order to ready them for a variety of audiences **Method of Spectral Mappings in the Inverse Problem Theory** V. A. Yurko,2002-01-01 Inverse problems of spectral analysis consist in recovering operators from their spectral characteristics Such problems often appear in mathematics mechanics physics electronics geophysics meteorology and other branches of natural science This monograph deals with inverse problems of spectral analysis for ordinary differential equations and aims to present the main results on inverse spectral problems using the so called method of spectral mappings which is one of the main tools in inverse spectral theory The book consists of three chapters and opens with the method of spectral mappings presented in the simplest version for the Sturm Liouville operator The second chapter deals with the inverse problem of recovering higher order differential operators of the form on the half line and on a finite interval In this chapter the author introduces the so called Weyl matrix which is a generalization of the classical Weyl function for the selfadjoint second order differential operator The last chapter contains a study on inverse spectral problems for differential equations with nonlinear dependence on the spectral parameter This monograph will be of
