Problems Of Versions In Everyday Situations:

Problems of Versions in Everyday Situations E. C. Cuff, 1993 This work offers a combination of theoretical critique and empirical study It criticizes Alfred Schutz s discussion of multiple realities Melvin Pollner s account of reality disjunctures and Dorothy Smith s textual analysis of a story of a person becoming mentally ill Cuff examines transcripts of persons talking about marital breakups and a radio program in which a family discusses a problem in the presence of a commentator and experts The author stresses the temporal development of the presentation and resolution of conflicting versions of events as told by different persons Contrasting versions are shown to not simply clash or contradict each other but to provide elaborations and alternative ways of describing events Cuff shows that versions are not rigidly held and that parties show an awareness of how their versions contribute to an intersubjective conversation Co published with the International Institute for Ethnomethodology and Conversation Analysis

Selves and Identities in Narrative and Discourse Michael G. W. Bamberg, Anna De Fina, Deborah Schiffrin, 2007 The different traditions that have inspired the contributors to this volume can be divided along three different orientations one that is rooted predominantly in sociolinguistics a second that is ethnomethodologically informed and a third that came in the wake of narrative interview research All three share a commitment to view self and identity not as essential properties of the person but as constituted in discursive practices and particularly in narrative Moreover since self and identity are held to be phenomena that are contextually and continually generated they are defined and viewed in the plural as selves and identities In the attempt of moving closer toward a process oriented approach to the formation of selves and identities this volume sets the stage for future discussions of the role of narrative and discourse in this generation process and for how a close analysis of these processes can advance an understanding of the world around us and within this world of identities and selves

Mental Health Interventions in Everyday Life Alan E. Kazdin, 2025-10 *Extension Service Review* United States. Extension Service, 1970

From Is to Ought: The Place of Normative Models in the Study of Human Thought Shira Elqayam, David E. Over, 2016-08-12 In the study of human thinking two main research questions can be asked Descriptive Q What is human thinking like Normative Q What ought human thinking be like For decades these two questions have dominated the field and the relationship between them generated many a controversy Empirical normativist approaches regard the answers to these questions as positively correlated in essence human thinking is what it ought to be although what counts as the ought standard is moot In contemporary theories of reasoning and decision making this is often associated with a Panglossian framework an adaptationist approach which regards human thinking as a priori rational In contrast prescriptive normativism sees the answers to these two questions as negatively correlated Normative models are still relevant to human thought but human behaviour deviates from them quite markedly with the invited conclusion that humans are often irrational Prescriptive normativism often results in a Meliorist agenda which sees rationality as amenable to education Both empirical and

prescriptive normativism can be contrasted with a descriptivist framework for psychology of human thinking Following Hume's strict divide between the is and the ought descriptivism regards the descriptive and normative research questions as uncorrelated or dissociated with only the former question suitable for psychological study of human behaviour This basic division carries over to the relation between normative ought rationality based on conforming to normative standards and instrumental is rationality based on achieving one's goals Descriptivist approaches regard the two as dissociated whereas normativist approaches tend to see them as closely linked with normative arguments defining and justifying instrumental rationality This research topic brings together diverse contributions to the continuing debate Featuring contributions from leading researchers in the field the e book covers a wide range of subjects arranged by six sections The standard picture Normativist perspectives In defence of soft normativism Exploring normative models Descriptivist perspectives Evolutionary and ecological accounts Empirical reports With a total of some 24 articles from 55 authors this comprehensive treatment includes theoretical analyses meta theoretical critiques commentaries and a range of empirical reports The contents of the Research Topic should appeal to psychologists linguists philosophers and cognitive scientists with research interests in a wide range of domains from language through reasoning judgment and decision making and moral judgment to epistemology and theory of mind philosophical logic and meta ethics

Mathematical and Statistics Anxiety: Educational, Social, Developmental and Cognitive Perspectives Kinga Morsanyi, Irene Cristina Mammarella, Denes Szűcs, Carlo Tomasetto, Caterina Primi, Erin Anne Maloney, 2017-01-19 Mathematical anxiety is a feeling of tension apprehension or fear which arises when a person is faced with mathematical content The negative consequences of mathematical anxiety are well documented Students with high levels of mathematical anxiety might underperform in important test situations they tend to hold negative attitudes towards mathematics and they are likely to opt out of elective mathematics courses which also affects their career opportunities Although at the university level many students do not continue to study mathematics social science students are confronted with the fact that their disciplines involve learning about statistics another potential source of anxiety for students who are uncomfortable with dealing with numerical content Research on mathematical anxiety is a truly interdisciplinary field with contributions from educational developmental cognitive social and neuroscience researchers The current collection of papers demonstrates the diversity of the field offering both new empirical contributions and reviews of existing studies The contributors also outline future directions for this line of research
