Processing Of Multidimensional Signals:

Processing of Multidimensional Signals Alexandre Smirnov,2013-03-09 In this book signals or images described by functions whose number of arguments varies from one to five are considered This arguments can be time spatial dimensions or wavelength in a polychromatic signal The book discusses the basics of mathematical models of signals their transformations in technical pre processing systems and criteria of the systems quality The models are used for the solution of practical tasks of system analysis measurement and optimization and signal restoration Several examples are given

Multidimensional Digital Signal Processing Dan E. Dudgeon,Russell M. Multidimensional Signal and Color Image Processing Using Lattices Eric Dubois,2019-04-29 An Innovative Approach to Multidimensional Signals and Systems Theory for Image and Video Processing In this volume Eric Dubois further develops the theory of multi D signal processing wherein input and output are vector value signals With this framework he introduces the reader to crucial concepts in signal processing such as continuous and discrete domain signals and systems discrete domain periodic signals sampling and reconstruction light and color random field models image representation and more While most treatments use normalized representations for non rectangular sampling this approach obscures much of the geometrical and scale information of the signal In contrast Dr Dubois uses actual units of space time and frequency Basis independent representations appear as much as possible and the basis is introduced where needed to perform calculations or implementations Thus lattice theory is developed from the beginning and rectangular sampling is treated as a special case This is especially significant in the treatment of color and color image processing and for discrete transform representations based on symmetry groups including fast computational algorithms Other features include An entire chapter on lattices giving the reader a thorough grounding in the use of lattices in signal processing Extensive treatment of lattices as used to describe discrete domain signals and signal periodicities Chapters on sampling and reconstruction random field models symmetry invariant signals and systems and multidimensional Fourier transformation properties Supplemented throughout with MATLAB examples and accompanying downloadable source code Graduate and doctoral students as well as senior undergraduates and professionals working in signal processing or video image processing and imaging will appreciate this fresh approach to multidimensional signals and systems theory both as a thorough introduction to the subject and as inspiration for future research

Multidimensional Signal, Image, and Video Processing and Coding John W. Woods,2006-04-24 Digital images have become mainstream of late notably within HDTV cell phones personal cameras and many medical applications The processing of digital images and video includes adjusting illumination manufacturing enlargements reductions and creating contrast This development has made it possible

to take long forgotten badly damaged photos and make them new again with image estimation It can also help snapshot photographers with image restoration a method of reducing the influence of an unsteady hand Dr Woods has constructed a book for professionals and graduate students that will give them the thorough understanding of image and video processing that they need in order to contribute to this hot technology s future advances Examples and problems at the end of each chapter help the reader digest what has just been read Forged from a theoretical base this exceptional book develops into an essential guide to hands on endeavors in signal processing FOR INSTRUCTORS To obtain access to the solutions manual for this title simply register on our textbook website textbooks elsevier com and request access to the Computer Science or Electronics and Electrical Engineering subject area Once approved usually within one business day you will be able to access all of the instructor only materials through the Instructor Manual link on this book s academic web page at textbooks elsevier com Overflowing with over 150 digital images Brimming with productive examples and challenging problems Written by celebrated MIT graduate who has authored four other exceptional books

Learning Multidimensional Signal Processing Magnus Borga,1998

Multidimensional Processing of Video Signals Giovanni L. Sicuranza,Sanjit K. Mitra,2012-12-06 A color time varying image can be described as a three dimensional vector representing the colors in an appropriate color space defined on a three dimensional spatiotemporal space In conventional analog television a one dimensional signal suitable for transmission over a communication channel is obtained by sampling the scene in the vertical and temporal directions and by frequency multiplexing the luminance and chrominance information In digital processing and transmission systems sampling is applied in the horizontal direction too on a signal which has been already scanned in the vertical and temporal directions or directly in three dimensions when using some solid state sensor As a consequence in recent years it has been considered quite natural to assess the potential advantages arising from an entire multidimensional approach to the processing of video signals As a simple but significant example a composite color video signal such as the conventional PAL or NTSC signal possesses a three dimensional spectrum which by using suitable three dimensional filters permits horizontal sampling at a rate which is less than that required for correctly sampling the equivalent one dimensional signal More recently it has been widely recognized that the improvement of the picture quality in current and advanced television systems requires well chosen signal processing algorithms which are multidimensional in nature within the demanding constraints of a real time implementation
