Diniz, José Gabriel de Figueiredo Coutinho, Zlatko Marinov Petrov, 2013-05-16 This book provides techniques to tackle the design challenges raised by the increasing diversity and complexity of emerging heterogeneous architectures for embedded systems It describes an approach based on techniques from software engineering called aspect oriented programming which allow designers to control today s sophisticated design tool chains while maintaining a single application source code Readers are introduced to the basic concepts of an aspect oriented domain specific language that enables control of a wide range of compilation and synthesis tools in the partitioning and mapping of an application to a heterogeneous and possibly multi core target architecture Several examples are presented that illustrate the benefits of the approach developed for applications from avionics and digital signal processing Using the aspect oriented programming techniques presented in this book developers can reuse extensive sections of their designs while preserving the original application source code thus promoting developer productivity as well as architecture and performance portability Describes an aspect oriented approach for the compilation and synthesis of applications targeting heterogeneous embedded computing architectures Includes examples using an integrated tool chain for compilation and synthesis Provides validation and evaluation for targeted reconfigurable heterogeneous architectures Enables design portability given changing target devices Allows developers to maintain a single application source code when targeting multiple architectures [Proceedings, 2022](#)
