revisits his classic text in the light of subsequent developments in a substantial commentary of fifty pages This work investigates the application of logic to problem solving and computer programming It assumes no previous knowledge of these fields and may be appropriate therefore as an introduction to logic the theory of problem solving and computer programming At the focal point is Computational Logic It centers around the famous slogan Algorithm Logic Control which was coined by the author and is explained in this book According to this view an algorithm consists of a problem description the logic part and a strategy to perform useful computations on this description the control part This separation of concerns ideally leads to declarative programs that are simple to develop clear to understand and easy to maintain

Computer-based Problem Solving Process Teodor Rus,2015-03-19 One side effect of having made great leaps in computing over the last few decades is the resulting over abundance in software tools created to solve the diverse problems Problem solving with computers has in consequence become more demanding instead of focusing on the problem when conceptualizing strategies to solve them users are side tracked by the pursuit of even more programming tools as available Computer Based Problem Solving Process is a work intended to offer a systematic treatment to the theory and practice of designing implementing and using software tools during the problem solving process This method is obtained by enabling computer systems to be more Intuitive with human logic rather than machine logic Instead of software dedicated to computer experts the author advocates an approach dedicated to computer users in general This approach does not require users to have an advanced computer education though it does advocate a deeper education of the computer user in his or her problem domain logic This book is intended for system software teachers designers and implementers of various aspects of system software as well as readers who have made computers a part of their day today problem solving **Programming for Problem Solving** Lenore G.
