Problems In Historical Epistemology:

Problems in Historical Epistemology Jerzy Kmita, 1988 **Problems in Historical Epistemology** Jerzy Kmita, Michael Turner, 1988-10-31 **Reconsidering Historical Epistemology** Matteo Vagelli, 2024-06-27 This book explores the key conceptual stakes underpinning historical epistemology The strong Anglophone interest in historical epistemology since at least the 1990s is typically attributed to its simultaneously philosophical and historical synthetic approach to the study of science Yet this account considered by critics to be an unreflective assumption has prevented historical epistemology from developing a clear understanding and definition especially regarding how precisely historical and philosophical reflections on the sciences should be combined Thus this book uniquely analyses how the problems and tensions inherent to the contemporary phase of historical epistemology can be clarified by reference to the classical French phase The archaeological method of Michel Foucault which draws on and transforms fundamental insights by Gaston Bachelard and Georges Canguilhem is used to exert an enduring influence on the field especially through the work of Ian Hacking and his philosophical cum historical analyses of styles of scientific reasoning Though this book is of great value to academic specialists and graduate students the fact it addresses questions broad in scope ensures it is also relevant to a range of scholars in many disciplines and will provoke discussion among those interested in foundational issues in history and philosophy of science Vagelli s book provides a both unique and uniquely important window into historical epistemology and its relation to contemporary philosophy of science Unique because nowhere else can one find a single work that treats the range of topics that he covers Uniquely important because Vagelli s clear concise and comprehensive survey details key interrelationships among a range of American British and European views currently in play regarding historical epistemology and philosophy of science as well as the institutional and intellectual vectors driving their associated epistemological positions Paul Roth UC Santa Cruz USA Uneasily the history and philosophy of science have bolstered and undermined each other for all too long Would history offer nothing but potted episodes to confirm or contradict transhistorical claims about science Would philosophy dismantle uncritical historicist accounts of scientific discoveries Historical epistemology offers a more integrated path at once a history of the present and a philosophy of the past Matteo Vagelli draws together the insights of the Francophone Anglophone and Germanophone traditions to give us a sparkling lucid account of seeing our standards of scientific understanding as developing across time always asking how did we come to our standards of demonstration and argument Peter Galison Harvard University USA [Handbook for the Historiography of Science](#) Mauro L. Condé, Marlon Salomon, 2023-09-30 This book aims to perform a critical and broad assessment of the historiography of science produced from the late nineteenth century to the early twenty first century It presents its main authors concepts ideas conceptions and schools It also analyzes the historical circumstances of the rise of the discipline history of science and the relations of the historiography of science with related areas These chapters do not understand the historiography of science as a mere

description or record of the history of science. Instead, they understand the historiography of science from the epistemological criteria and choices that guided the writing of the history of science in its different contexts. In other words, more than describing the record of the various possibilities of historiographical approaches to science, the chapters carry out an epistemological reflection to assess the bases, possibilities, scope, and limits of different historiographical conceptions, authors, and traditions that have established the writing of the history of science. This book can be conceived as a reference work not only for professional historians and philosophers but also for academics from different backgrounds who are initiating themselves in the universe of history and philosophy of science, be they scientists from different fields or young researchers from different backgrounds who want to start studying the history and philosophy of science.

The Oxford History of Historical Writing Axel Schneider, Daniel Woolf, 2011-05-05. The fifth volume of *The Oxford History of Historical Writing* offers essays by leading scholars on the writing of history globally since 1945. Divided into two parts, part one selects and surveys theoretical and interdisciplinary approaches to history, and part two examines select national and regional historiographies throughout the world. It aims at once to provide an authoritative survey of the field and to provoke cross-cultural comparisons. This is chronologically the last of five volumes in a series that explores representations of the past across the globe from the beginning of writing to the present day.

The Problem of Disenchantment Egil Asprem, 2018-05-31. Challenges the conventional view of a disenchanted and secular modernity and recovers the complex relation that exists between science, religion, and esotericism in the modern world. Max Weber famously characterized the ongoing process of intellectualization and rationalization that separates the natural world from the divine by excluding magic and value from the realm of science and reason, and fact from the realm of religion, as the disenchantment of the world. Egil Asprem argues for a conceptual shift in how we view this key narrative of modernity. Instead of a sociohistorical process of disenchantment that produces increasingly rational minds, Asprem maintains that the continued presence of magic and enchantment in people's everyday experience of the world created an intellectual problem for those few who were socialized to believe that nature should contain no such incalculable mysteries. Drawing on a wide range of early twentieth-century primary sources from theoretical physics, occultism, embryology, radioactivity, psychical research, and other fields, Asprem casts the intellectual life of high modernity as a synchronic struggle across conspicuously different fields that shared surprisingly similar intellectual problems about value, meaning, and the limits of knowledge. *The Problem of Disenchantment* is in its entirety extraordinarily well researched, argued, and written, representing at once the most complete and nuanced treatment of the notion of disenchantment within this network of scientific, religious, philosophical, and esoteric discourses and currents. *Nova Religio*.

Normative Economics in the History of Economic Thought Sina Badiei, 2024-06-21. This book examines the role of normative economics in the writings of Karl Marx, Ludwig von Mises, Milton Friedman, and Karl Popper. The book shows that while distinguishing positive from normative economics can be helpful, this distinction should not

minimize the importance of normative economics or reject the possibility of offering objective evaluations of social phenomena and policies in normative economics The book offers a critical assessment of the attempts by Marx Mises and Friedman to reduce scientific economics to the positive analysis of social phenomena alone Through a meticulous analysis of their work the book shows that their positive theories fail to justify their evaluations of economic phenomena and policies The book then draws on the writings of Popper to maintain that we should place normative economics at the center of economics The book argues that normative economics can choose the norms underlying its evaluations of social situations and policies objectively and relies on some of Popper s ideas to offer some criteria that can facilitate the selection of these norms The book will be of interest to economists historians of economic thought philosophers of economics and political theorists and philosophers

The Problem of Knowledge in Late Antiquity Center for Hermeneutical Studies in Hellenistic and Modern Culture,1978 *The Origins of Writing as a Problem of Historical Epistemology* Peter Damerow,1999 The Poznań School of Archaeology Arkadiusz Marciniak, Michał Pawleta, Włodzimierz Rączkowski,2026-01-01 This book provides a comprehensive overview of the Pozna School of Archaeology an original mode of archaeological thought that emerged in Pozna in the 1960s and 1970s The book examines the significance of this original Polish archaeological thought in its broad academic context and places it in the realm of the social and intellectual framework of Europe It is directed to the worldwide community of researchers interested in understanding the nature of the studies of the past and places this original and well developed school of archaeological thought in its broad geographical and chronological perspective The Pozna School of Archaeology made explicit efforts to break off ties with the culture history paradigm and rejected the simplified functional and rigid deductive nomological explanations Developed in the context of non Marxist historical materialism over decades it transformed itself into a distinct and multifaceted archaeological research school embedded in the tradition of cultural studies philosophy history and the natural sciences The book is suitable for undergraduate and graduate programmes in archaeology and archaeological theory

Texture in the Work of Ian Hacking María Laura Martínez Rodríguez,2021-01-19 This book offers a systematized

overview of Ian Hacking's work. It presents Hacking's oeuvre as a network made up of four interconnected key nodes: styles of scientific thinking, doing probability, making up people, and experimentation and scientific realism. Its central claim is that Michel Foucault's influence is the underlying thread that runs across the Canadian philosopher's oeuvre. Foucault's imprint on Hacking's work is usually mentioned in relation to styles of scientific reasoning and the human sciences. This research shows that Foucault's influence can in fact be extended beyond these fields insofar as the underlying interest to the whole corpus of Hacking's works, namely the analysis of conditions of possibility, is stimulated by the work of the French philosopher. Displacing scientific realism as the central focus of Ian Hacking's oeuvre opens up a very different landscape, showing behind the apparent dispersion of his works the far-reaching interest that amalgamates them to reveal the historical and situated conditions of possibility for the emergence of scientific objects and concepts. This book shows how Hacking's deployment of concepts such as looping effect, making up people, and interactive kinds can complement Foucauldian analyses, offering an overarching perspective that can provide a better explanation of the objects of the human sciences and their behaviors.

The Virginia Review of Asian Studies, 2004 Political Epistemology Pietro Daniel Omodeo, 2019-10-14. This book is an investigation of the ideological dimensions of the disciplinary discourses on science in line with the scholarly tradition of historical epistemology. It offers a programmatic treatment of the political epistemological problematic along three entangled lines of inquiry: socio-historical, epistemological, and historiographical. The book aims for a meta-level integration of the existing scholarship on the social and cultural history of science in order to consider the ways in which struggles for hegemony have constantly informed scientific discourses. This problematic is of primary relevance for scholars in Science Studies, philosophers, historians, and sociologists of science, but would also be relevant for anybody interested in scientific culture and political theory. Consumer Cultures, Political Discourse and the Problem of Cultural Politics Frank Mort, 1992

An Introduction to Historical Epistemology Mary Tiles, Jim Tiles, 1993-08-30. This introduction to the theory of knowledge argues for the continuing relevance of philosophical debates about knowledge by connecting them to issues of authority. The discussion takes the form of an essay in historical epistemology which treats the philosopher-politician Francis Bacon as its pivotal figure. This affords a non-Cartesian perspective on the transition to modern philosophy from which the distinctive configurations of the Cartesian framework can be discerned. The strategy is to use history as a route to a critical appraisal of modernism without embracing post-modernism. Ancient Greek discussions of knowledge from Protagoras to Epicurus via Plato and Aristotle are introduced to illustrate the sense in which modern philosophy broke with ancient tradition while being at the same time conditioned by it. The Baconian vision was of human progress achieved through the acquisition of knowledge which makes domination of nature possible. The tensions inherent in this vision and the way in which they have worked to undermine it are illustrated by reference to the views of Kant and Hume and by tracing their consequences. **Epistemology and History** Anna Zeidler-Janiszewska, 1996. ISBN 9042000635. paperback. NLG 90 00. The

papers in this volume are arranged under the following headings Humanistic knowledge On explanation and humanistic interpretation The historical dimension of culture and its studies Problems of artistic practice and its interpretation through genealogy and psychoanalysis *From Plato to Hitler* Christopher Sverre Norborg,1940 **Boston College studies in philosophy** ,1966 **On Historicizing Epistemology** Hans-Jörg Rheinberger,2010-03-09 Epistemology as generally understood by philosophers of science is rather remote from the history of science and from historical concerns in general Rheinberger shows that from the late nineteenth through the late twentieth century a parallel alternative discourse sought to come to terms with the rather fundamental experience of the thoroughgoing scientific changes brought on by the revolution in physics Philosophers of science and historians of science alike contributed their share to what this essay describes as an ongoing quest to historicize epistemology Historical epistemology in this sense is not so concerned with the knowing subject and its mental capacities Rather it envisages science as an ongoing cultural endeavor and tries to assess the conditions under which the sciences in all their diversity take shape and change over time
