Applications of Artificial Intelligence in Process Systems Engineering Jingzheng Ren, Weifeng Shen, Yi Man, Lichun Dong, 2021-06-05 Applications of Artificial Intelligence in Process Systems Engineering offers a broad perspective on the issues related to artificial intelligence technologies and their applications in chemical and process engineering The book comprehensively introduces the methodology and applications of AI technologies in process systems engineering making it an indispensable reference for researchers and students As chemical processes and systems are usually non linear and complex thus making it challenging to apply AI methods and technologies this book is an ideal resource on emerging areas such as cloud computing big data the industrial Internet of Things and deep learning With process systems engineering s potential to become one of the driving forces for the development of AI technologies this book covers all the right bases Explains the concept of machine learning deep learning and state of the art intelligent algorithms Discusses AI based applications in process modeling and simulation process integration and optimization process control and fault detection and diagnosis Gives direction to future development trends of AI technologies in chemical and process engineering

Semantic Web Technologies for Intelligent Engineering Applications Stefan Biffl, Marta Sabou, 2016-11-14 This is the first book to explore how Semantic Web technologies SWTs can be used to create intelligent engineering applications IEAs Technology specific chapters reflect the state of the art in relevant SWTs and offer guidelines on how they can be applied in multi disciplinary engineering settings characteristic of engineering production systems In addition a selection of case studies from various engineering domains demonstrate how SWTs can be used to create IEAs that enable for example defect detection or constraint checking Part I Background and Requirements of Industrie 4 0 for Semantic Web Solutions provides the background information needed to understand the book and addresses questions concerning the semantic challenges and requirements of Industrie 4 0 and which key SWT capabilities may be suitable for implementing engineering applications In turn Part II Semantic Web Enabled Data Integration in Multi Disciplinary Engineering focuses on how SWTs can be used for data integration in heterogeneous multi disciplinary engineering settings typically encountered in the creation of flexible production systems Part III Creating Intelligent Applications for Multi Disciplinary Engineering demonstrates how the integrated engineering data can be used to support the creation of IEAs while Part IV Related and Emerging Trends in the Use of Semantic Web in Engineering presents an overview of the broader spectrum of approaches that make use of SWTs to support engineering settings A final chapter then rounds out the book with an assessment of the strengths weaknesses and compatibilities of SWTs and an outlook on future opportunities for applying SWTs to create IEAs in flexible industrial production systems This book seeks to build a bridge between two communities industrial production on one hand and Semantic Web on the other Accordingly stakeholders from both communities should find this book useful in their work Semantic Web researchers will gain a better understanding of the challenges and requirements of the industrial production

domain offering them guidance in the development of new technologies and solutions for this important application area. In turn, engineers and managers from engineering domains will arrive at a firmer grasp of the benefits and limitations of using SWTs, helping them to select and adopt appropriate SWTs more effectively. In addition, researchers and students interested in industrial production-related issues will gain valuable insights into how and to what extent SWTs can help to address those issues.

Applications in Industry, 1998-12-17 Volume I contains a brief review of adsorption history and its development for practical purposes up until now. It also presents some important information on adsorbents and catalysts as well as on the methods of their characterization. The part of this volume dealing with practical industrial applications includes chapters presenting advanced technical tools for high capacity adsorption, separation of liquid and gas mixtures, development of new adsorbents for removal of hazardous contaminants from combustion flue gases and wastewaters, degasification of coal seams and fabrication of inorganic membranes and their applications. A comprehensive review is also included on contemporary utility of self-assembled monolayers, adsorption proteins and their role in modern industry, adsorption methods in technology of optical fibre glasses, sol-gel technology, solid desiccant dehumidification systems, etc. The articles give both the scientific backgrounds of the phenomena discussed and emphasize their practical aspects. The chapters give not only brief current knowledge about the studied problems but are also a source of topical literature on the subject. A comprehensive bibliography on adsorption principles, design data and adsorbent materials for industrial applications for the period 1967-1997 concludes the book.
