

PROBABILITY DENSITY OF

STRESSORS OF THE WORKING CLASS AND LOWER SERVICE OCCUPATIONS

W. J. H. JENSEN

Department of Psychology, University of York, York YO1 5DD, England

Abstract. The probability density of stressors of the working class and lower service occupations is

examined using a sample of 1000 subjects from the working class and lower service occupations.

The results show that the probability density of stressors is higher for the working class and lower service occupations than for the middle class and upper service occupations.

The results also show that the probability density of stressors is higher for the working class and lower service occupations than for the middle class and upper service occupations.

The results also show that the probability density of stressors is higher for the working class and lower service occupations than for the middle class and upper service occupations.

The results also show that the probability density of stressors is higher for the working class and lower service occupations than for the middle class and upper service occupations.

The results also show that the probability density of stressors is higher for the working class and lower service occupations than for the middle class and upper service occupations.

The results also show that the probability density of stressors is higher for the working class and lower service occupations than for the middle class and upper service occupations.

The results also show that the probability density of stressors is higher for the working class and lower service occupations than for the middle class and upper service occupations.

The results also show that the probability density of stressors is higher for the working class and lower service occupations than for the middle class and upper service occupations.

The results also show that the probability density of stressors is higher for the working class and lower service occupations than for the middle class and upper service occupations.

The results also show that the probability density of stressors is higher for the working class and lower service occupations than for the middle class and upper service occupations.

The results also show that the probability density of stressors is higher for the working class and lower service occupations than for the middle class and upper service occupations.

The results also show that the probability density of stressors is higher for the working class and lower service occupations than for the middle class and upper service occupations.
