Contribution of Status Factors to Relationships Between Airmen's Attitudes and Job Performance Francis D. Harding,1961 Previous investigation has shown little relationship between self report measures of an airman s attitudes morale and his rated job proficiency The data of one such study were reanalyzed by a multiple regression technique to determine whether military status variables military rank length of service kind of duty affect correlation of attitude measures with proficiency ratings The addition of such variables to the attitude variables contributed significantly to prediction of supervisors ratings of proficiency but the attitude variables did not significantly increase prediction from the status variables alone The findings show the importance of considering personal and situational factors when evaluating effects of attitude and morale *Technical Note* United States.
