Observation Of The Earth System From Space:

Observation of the Earth System from Space Jakob Flury,Reiner Rummel,Christoph Reigber,Markus Rothacher,Gerd Boedecker,Ulrich Schreiber,2006-02-28 In the recent years space based observation methods have led to a substantially improved understanding of Earth system Geodesy and geophysics are contributing to this development by measuring the temporal and spatial variations of the Earth's shape gravity field and magnetic field as well as at sphere density In the frame of the German R D programme GEOTECHNOLOGIEN research projects have been launched in 2002 related to the satellite missions CHAMP GRACE and ESA's planned mission GOCE to complementary terrestrial and airborne sensor systems and to consistent and stable high precision global reference systems for satellite and other techniques In the initial 3 year phase of the research programme 2002-2004 new gravity field models have been computed from CHAMP and GRACE data which outperform previous models in accuracy by up to two orders of magnitude for the long and medium wavelengths A special highlight is the termination of seasonal gravity variations caused by changes in continental water masses For GOCE to be launched in 2006 new gravity field analysis methods are under development and integrated into the ESA processing system 200 000 GPS radio occultation profiles observed by CHAMP have been processed on an operational basis They represent new and excellent information on atmospheric refractivity temperature and water vapor These new developments require geodetic space techniques such as VLBI SLR LLR GPS to be combined and synchronized as if being one global instrument

Observation of the Earth and Its Environment Herbert J. Kramer,2019-01-30 This book is about spaceborne missions and instruments In addition surveys of airborne missions and of campaigns can be found on the accompanying CD ROM in pdf format Compared with the 3rd edition the spaceborne part grew from about 300 to 1000 pages The complete text including the electronic only chapters contains more than 1900 pages New chapters treat the history of Earth observation and university missions The number of commercial Earth imaging missions has grown significantly A chapter contains reference data and definitions Extensive appendices provide a comprehensive glossary acronyms and abbreviations and an index of sensors An effort has been made to present the information in context to point out relationships and interconnections The book may serve as a reference and guide to all involved in the various national and international space programs researchers and managers service providers and data users teachers and students

Scientific Satellite and Moon-Based Earth Observation for Global Change Huadong Guo,Wenxue Fu,Guang Liu,2019-06-27 Global change involves complex and far reaching variations in the Earth's systems and satellite observations have been widely used in global change studies Over the past five decades Earth observation has developed into a comprehensive system that can conduct dynamic monitoring of the land the oceans and the atmosphere at the local regional and even global scale At the same time although a large number of Earth observation satellites have been launched very few of them are used in global change studies The lack of scientific satellite programs greatly hinders research on global change This book proposes using a series of global change scientific

satellites to establish a scientific observation grid for global environmental change monitoring from space and offers the first comprehensive review of lunar based Earth observation These scientific satellites could provide not only basic datasets but also scientific support in facilitating advances in international global change research

Satellite Observations of the Earth's Environment Committee on NASA-NOAA Transition from Research to Operations,2003-06-06 This report addresses the transition of research satellites instruments and calculations into operational service for accurately observing and predicting the Earth s environment These transitions which take place in large part between NASA and NOAA are important for maintaining the health safety and prosperity of the nation and for achieving the vision of an Earth Information System in which quantitative information about the complete Earth system is readily available to myriad users Many transitions have been ad hoc sometimes taking several years or even decades to occur and others have encountered roadblocks lack of long range planning resources institutional or cultural differences for instance and never reached fruition Satellite Observations of Earth s Environment recommends new structures and methods that will allow seamless transitions from research to practice
