Progress In Optics Volume Xxx:

Progress in Optics, 1992-06-26 Confirming the fact that optics continues to be a highly active field of research where many interesting developments are currently taking place the latest volume in this renowned series presents five review articles by well known experts on topics of current interest in optics The first article concerns quantum fluctuations a phenomenon encountered directly or indirectly in all optical measurements Such fluctuations set limits to attainable accuracy with which measurements can be made In recent years theoretical as well as experimental research has demonstrated that limitations arising from quantum fluctuations can sometimes be circumvented to some extent These developments are of importance from the standpoint of basic physics as well as in connection with technological applications such as noise reduction in communication systems The second article deals with correlation holographic interferometry and speckle photography paying special attention to the effects of random variation of surface microstructure on the contrast of interference fringes The article which follows covers an important subject in the broad area of wave propagation in random media namely wave localization This phenomenon is a subtle manifestation of interference of multiply scattered waves and provides information about important properties of disordered systems The article considers mainly localization in one dimensional systems which elucidate some of the underlying physics The fourth article discusses an important nonlinear phenomenon namely soliton propagation in fibres Solitons are pulses which can propagate over long distances without change in shape Because of their considerable stability they are of particular interest for communication systems The concluding article presents the theory and describes experiments on elementary quantum systems in the context of cavity quantum optics Such experiments are providing deeper understanding of the interaction of light with matter and give new insights into the foundations of quantum mechanics

Klyatskin,2014-07-14 In some cases certain coherent structures can exist in stochastic dynamic systems almost in every particular realization of random parameters describing these systems Dynamic localization in one dimensional dynamic systems vortexgenesis vortex production in hydrodynamic flows and phenomenon of clustering of various fields in random media i e appearance of small regions with enhanced content of the field against the nearly vanishing background of this field in the remaining portion of space are examples of such structure formation The general methodology presented in

Volume 1 is used in Volume 2 Coherent Phenomena in Stochastic Dynamic Systems to expound the theory of these phenomena in some specific fields of stochastic science among which are hydrodynamics magnetohydrodynamics acoustics optics and radiophysics The material of this volume includes particle and field clustering in the cases of scalar density field and vector magnetic field passive tracers in a random velocity field dynamic localization of plane waves in layered random media as well as monochromatic wave propagation and caustic structure formation in random media in terms of the scalar parabolic equation Progress in optics T. Physics and Applications of Optical Solitons in Fibres '95 Akira Hasegawa,2012-12-06 This book summarizes the proceedings of the invited talks presented at the International Symposium of Physics and Application of Optical Solitons in Fibers held in Kyoto during November 14 to 17 1995 As a result of worldwide demand for ultra high bitrate transmissions and increased scientific interests from the soliton community research on optical solitons in fibers has made a remarkable progress in recent years In view of these trends and with the support of the Japanese Ministry of Posts and Telecommunications the Research Group for Optical Soliton Communications ROSC chaired by Akira Hasegawa was established in Japan in April 1995 to promote collaboration and information exchange among communication service companies industries and academic circles in the theory and application of optical solitons This symposium was organized as a part of the ROSC activities The symposium attracted enthusiastic response by worldwide researchers involved in this subject which has lead to the most intensive meeting that the editor ever attended The reader will find the contents to be well balanced among theory experiment and technology Although the evaluation of the contents shall naturally depend on the particular area of interest of the reader the symposium has confirmed that the soliton based light wave transmission has achieved the best result in one channel both in distance of transmission and in bitrate although in wavelength division multiplexed WDM systems NRZ transmission has yet better result

Quantum Information Gregg Jaeger,2007-04-03 In one word this is a responsible book the rest is commentary Around 1992 a few of us were led by Charles Bennett into a Garden of Eden of quantum information communication and computation No sooner had we started exploring our surroundings and naming the birds and the beasts than Peter Shor put an end to that apparent innocence by showing that factoring could be turned by means of quantum hardware into a polynomial task Fast factoring meant business everybody seemed to be awfully interested in factoring Not that anyone had any use for factoring per se but it seemed that all the world s secrets were protected by factor keyed padlocks Think of all the power and the glory and something else that you might get by acting as a consultant to big businesses and government agencies helping them pick everyone else s locks and at the same time build unpickable ones well nearly unpickable for themselves And if one can get an exponential advantage in factoring wouldn t an exponential advantage be lying around the corner for practically any other computational task Quantum information and all that has indeed blossomed in a few years into a wonderful new chapter
