Project Scheduling With Time Windows:

Project Scheduling with Time Windows Ulrich Dorndorf, 2012-12-06 Project Scheduling is concerned with the allocation of scarce resources over time. The rich optimisation models with time windows that are treated in this book cover a multitude of practical decision problems arising in diverse application areas such as construction engineering or make to order production planning. The book shows how Constraint Propagation techniques from Artificial Intelligence can be successfully combined with Operations Research methods for developing powerful exact and heuristic solution algorithms for a very general class of scheduling problems. Example applications demonstrate the effectiveness of the approach. **Project**

Scheduling with Time Windows and Scarce Resources Klaus Neumann, Christoph Schwindt, Jürgen Zimmermann, 2012-12-06 A survey of the state of the art of deterministic resource constrained project scheduling with time windows. General temporal constraints and several different types of limited resources are considered. A large variety of time based financial and resource based objectives important in practice are studied. A thorough structural analysis of the feasible region of project scheduling problems and a classification and detailed investigation of objective functions are performed which can be exploited for developing efficient exact and heuristic solution methods. New interesting applications of project scheduling to production and operations management as well as investment projects are discussed in the second edition.

Resource-constrained Project Scheduling with Time Windows Klaus Neumann, Christoph Schwindt, Jürgen Zimmermann, 2005 **Project scheduling with time windows and scarce resources** Klaus Neumann, 2000 *Project Scheduling with Time Windows and Scarce Resources* Klaus Neumann, 2000 **Resource Constrained Project Scheduling with Time Windows** Birger Franck, Klaus Neumann, 1997 Resource-constrained Project Scheduling Problem with Time Windows Birger Franck, Klaus Neumann, 1997 Exact Solution Methods of Project Scheduling Problems Carsten Heuring, 2007 Seminar paper from the year 2002 in the subject Business economics Operations Research grade 1.9 http://www.uni-jena.de/Lehrstuhl_f_r_ABWL_insb_Betriebswirtschaftliche_Entscheidungsanalyse_course/Quantitative_Methoden_der_Projektplanung 12 entries in the bibliography language English abstract The use of project management is continuously growing in industrial and public organizations providing an efficient instrument for mastering the challenges caused by steadily shortening product life cycles, decreasing profit margins and global markets. One of the main tasks in project management is the scheduling of the project that is the temporal arrangement of activities. Resources are required to perform activities and are available with limited capacities. Therefore within the project management the activities are to be scheduled subject to precedence and resource constraints. In practice different types of resources may occur. Renewable resources e.g. machines are available at each point in time. Nonrenewable resources e.g. money are depleted by use. These resources only affect the scheduling of activities if activities can be carried out in alternative modes which differ for example in duration and amount of resources needed. To describe these scheduling problems we use mathematical models. The

techniques to solve resource constrained project scheduling problems are described with branch and bound methods
