John Matthewson, 2009-08-13 A Comprehensive and Self Contained Treatment of the Theory and Practical Applications of Ceramic Materials When failure occurs in ceramic materials it is often catastrophic instantaneous and total Now in its Second Edition this important book arms readers with a thorough and accurate understanding of the causes of these failures and how to design ceramics for failure avoidance It systematically covers Stress and strain Types of mechanical behavior Strength of defect free solids Linear elastic fracture mechanics Measurements of elasticity strength and fracture toughness Subcritical crack propagation Toughening mechanisms in ceramics Effects of microstructure on toughness and strength Cyclic fatigue of ceramics Thermal stress and thermal shock in ceramics Fractography Dislocation and plastic deformation in ceramics Creep and superplasticity of ceramics Creep rupture at high temperatures and safe life design Hardness and wear And more While maintaining the first edition's reputation for being an indispensable professional resource this new edition has been updated with sketches explanations figures tables summaries and problem sets to make it more student friendly as a textbook in undergraduate and graduate courses on the mechanical properties of ceramics *Properties and Microstructure* R. K. MacCrone, 1977 **Scientific and Technical Books and Serials in Print**, 1989 **Magnetoelectric Polymer-Based Composites** Senentxu Lanceros-Méndez, Pedro Martins, 2017-06-21 The first book on this topic provides a comprehensive and well structured overview of the fundamentals synthesis and emerging applications of magnetoelectric polymer materials Following an introduction to the basic aspects of polymer based magnetoelectric materials and recent developments subsequent chapters discuss the various types as well as their synthesis and characterization There then follows a review of the latest applications such as memories sensors and actuators The book concludes with a look at future technological advances An essential reference for entrants to the field as well as for experienced researchers *Comprehensive Hard Materials* Daniele Mari, Luis Miguel, Christoph E. Nebel, 2014-02-01 Comprehensive Hard Materials Three Volume Set deals with the production uses and properties of the carbides nitrides and borides of these metals and those of titanium as well as tools of ceramics the superhard boron nitrides and diamond and related compounds Articles include the technologies of

powder production including their precursor materials milling granulation cold and hot compaction sintering hot isostatic pressing hot pressing injection moulding as well as on the coating technologies for refractory metals hard metals and hard materials The characterization testing quality assurance and applications are also covered Comprehensive Hard Materials provides meaningful insights on materials at the leading edge of technology It aids continued research and development of these materials and as such it is a critical information resource to academics and industry professionals facing the technological challenges of the future Hard materials operate at the leading edge of technology and continued research and development of such materials is critical to meet the technological challenges of the future Users of this work can improve their knowledge of basic principles and gain a better understanding of process structure property relationships With the convergence of nanotechnology coating techniques and functionally graded materials to the cognitive science of cemented carbides cermets advanced ceramics super hard materials and composites it is evident that the full potential of this class of materials is far from exhausted This work unites these important areas of research and will provide useful insights to users through its extensive cross referencing and thematic presentation To link academic to industrial usage of hard materials and vice versa this work deals with the production uses and properties of the carbides nitrides and borides of these metals and those of titanium as well as tools of ceramics the superhard boron nitrides and diamond and related compounds
