*Scientific Models and Decision Making* Eric Winsberg, Stephanie Harvard, 2024-02-08 This Element introduces the philosophical literature on models with an emphasis on normative considerations relevant to models for decision making Chapter 1 gives an overview of core questions in the philosophy of modeling Chapter 2 examines the concept of model adequacy for purpose using three examples of models from the atmospheric sciences to describe how this sort of adequacy is determined in practice Chapter 3 explores the significance of using models that are not adequate for purpose including the purpose of informing public decisions Chapter 4 provides a basic framework for values in modelling using a case study to highlight the ethical challenges in building models for decision making It concludes by establishing the need for strategies to manage value judgments in modelling including the potential for public participation in the process *Investigating Complex Phenomena: Bridging between Systems Thinking and Modeling in Science Education* Tom Bielik, Moritz Krell, Laura Zangori, Orit Ben Zvi Assaraf, 2023-11-15 Understanding the complexity of the natural world and making sense of phenomena is one of the main goals of science and science education When investigating complex phenomena such as climate change or pandemic outbreaks students are expected to engage in systems thinking by considering the boundaries of the investigated system identifying the relevant components and their interactions and exploring system attributes such as hierarchical organization dynamicity feedback loops and emergence Scientific models are tools that support students reasoning and understanding of complex systems and students are expected to develop their modeling competence and to engage in the modeling process by constructing testing revising and using models to explain and predict phenomena Computational modeling tools for example provide students with the opportunity to explore big data run simulations and investigate complex systems Therefore both systems thinking and modeling approaches are important for science education when investigating complex phenomena How to Do Science with Models Axel Gelfert, 2015-12-21 Taking scientific practice as its starting point this book charts the complex territory of models used in science It examines what scientific models are and what their function is Reliance on models is pervasive in science and scientists often need to construct models in order to explain or predict anything of interest at all The diversity of kinds of models one finds in science ranging from toy models and scale models to theoretical and mathematical models has attracted attention not only from scientists but also from philosophers sociologists and historians of science This has given rise to a wide variety of case studies that look at the different uses to which models have been put in specific scientific contexts By exploring current debates on the use and building of models via cutting edge examples drawn from physics and biology the book provides broad insight into the methodology of modelling in the natural sciences It pairs specific arguments with introductory material relating to the ontology and the function of models

and provides some historical context to the debates as well as a sketch of general positions in the philosophy of scientific models in the process
