**Tangentiallites and Tangentiallites. The Planets are Not Projectiles, But Tangentiallites. The Ocean's Tides are the Result of Tangential and Radial Forces. A Modern Discussion** Asahel Phelps Pichereau, 1894 *Sport Diver*, 2001-01 **The Exoplanet Handbook** Michael Perryman, 2018-08-30 With the discovery of planets beyond our solar system 25 years ago exoplanet research has expanded dramatically with new state of the art ground based and space based missions dedicated to their discovery and characterisation With more than 3 500 exoplanets now known the complexity of the discovery techniques observations and physical characterisation have grown exponentially This Handbook ties all these avenues of research together across a broad range of exoplanet science Planet formation exoplanet interiors and atmospheres and habitability are discussed providing in depth coverage of our knowledge to date Comprehensively updated from the first edition it includes instrumental and observational developments in depth treatment of the new Kepler mission results and hot Jupiter atmospheric studies and major updates on models of exoplanet formation With extensive references to the research literature and appendices covering all individual exoplanet discoveries it is a valuable reference to this exciting field for both incoming and established researchers **Storying the Ecocatastrophe** Helena Duffy, Katarina Leppänen, 2024-05-31 How do writers and artists represent the climate catastrophe so that their works stir audiences to political action or at least raise their environmental awareness without however appearing didactic Storying the Ecocatastrophe attempts to answer this question while interrogating the potential of narrative to become a viable political force The collection of essays achieves this by examining the representational strategies and ideological goals of contemporary cultural productions about climate change These productions have been created across different genres such as the traditional novel dance performance solarpunk economic report collage and space opera as well as across different languages and cultures The volume s twelve chapters demonstrate that rising temperatures erratic weather extinction of species depletion of resources and coastal erosion and flooding are an effect of our abusive relationship with nature They also show that our use of nuclear power extraction of natural resources and extensive farming including heavy reliance on pesticides intersect with intrahuman violence as fleshed out by heteropatriarchy racism neo colonialism and capitalism They finally argue that human activity has indirectly contributed to other contemporary crises namely the migrant crisis and the spread of contagious diseases such as Covid 19 Chapter 8 of this book is freely available as a downloadable Open Access PDF

*The Story of CO<sub>2</sub> Is the Story of Everything* Peter Brannen, 2005-08-26 Ambitious absorbing Brannen is an effusive maximalist writer a mind vividly alive on the page and his arguments like his writing are hugely compelling The New York Times Book Review How carbon dioxide made planet Earth shaped human history and now holds our future in the balance Every year we are dangerously warping the climate by putting gigantic amounts of carbon dioxide into the air But CO<sub>2</sub> isn't merely the by-product of burning fossil fuels it is also fundamental to how our planet works All life is ultimately made from CO<sub>2</sub> and it has kept Earth bizarrely habitable for hundreds of millions of years In short it is the most important substance on Earth But how is it that CO<sub>2</sub> is as essential to life on Earth as it is capable of destroying it In *The Story of CO<sub>2</sub> Is the Story of Everything* award-winning science journalist Peter Brannen reveals how carbon dioxide's movement through rocks air water and life has kept our planet's climate livable its air breathable and its oceans hospitable to complex life Starting at the dawn of life almost 4 billion years ago and working all the way up through today's global climate crisis and beyond he illuminates how CO<sub>2</sub> has been responsible for the planet's many deaths and rebirths for shaping the evolution of life and for the development of modern human society And he argues that it's only by reckoning with this planetary scale history that we can understand the cosmic stakes of our current moment on Earth and how dangerous our experiment with the climate really is Drawing on groundbreaking research and with a clear-eyed perspective Brannen shows how a deep exploration of the carbon cycle can shed light on the way forward for humanity as we try to avert environmental catastrophe in the future And it all begins with a richer understanding of the critical role of CO<sub>2</sub> in our world How has a single substance dictated our planet's fate for billions of years and what does its deep history tell us about our own survival

*The Planetary Thermostat* Follow the epic journey of carbon through rocks air water and life and learn how this delicate cycle has kept Earth habitable for eons and why our interference is so dangerous

*A 4 Billion Year Biography* Travel from the dawn of life through Snowball Earth and the age of dinosaurs to see how CO<sub>2</sub> has repeatedly remade the world driving both creation and catastrophe
