*Into the Deep* Karsten Schneider,Peter Batson,2008 How inappropriate it was to name our planet Earth when quite clearly we should have called it Ocean 1 36 billion cubic kilometres of water 326 million cubic miles weighing over a million trillion tons covers more than 70 percent of our planet s surface Strip Earth of its topography and an uninterrupted ocean would submerge the planet under 2 500 metres 8 200 feet of water Earth s five oceans are one of the wonders of the solar system they cover the Mid Atlantic Ridge our planet s most extensive mountain range host the Great Barrier Reef the largest structure built by living organisms and provide the habitat for Earth s most extreme lifeforms the denizens of the deep nightmarish apparitions bristling with fangs and fluorescence Yet despite its proximity and riches in many ways we know more about the surface of Mars than we know about the deep ocean From warm equatorial seas to ice bound polar oceans *Into the Deep* charts our exploration of Earth s final frontier and its inhabitants as it descends from bright coral reefs to the eternal cold darkness of the abyss It is a voyage that will astonish the reader just as the latest deep sea discoveries regularly confound scientists as they meet the Giant Squid s bigger brother the Colossal Squid and encounter the utterly alien environment that surrounds black smokers hydrothermal rifts in the Earth s crust

,1983 **Advances in Ocean Exploration** Adam Soule, Daniel Wagner, Aurora Elmore, Leila J. Hamdan, 2024-09-20 The ocean covers more than 70% of the Earth's surface and encompasses 99% of its habitable volume yet is largely unexplored. However, new technologies, approaches, and a growing recognition of the ocean's role in sustaining the health, wealth, and security of modern society has spurred a rapid acceleration in ocean exploration and discovery. Past ocean exploration efforts have fundamentally impacted our view of the bounds of life on the planet, the human-ocean relationship, and the Earth's inner workings, and many more discoveries yet remain. The varied stakeholders for ocean exploration are exemplified in many of the UN Ocean Decade challenges that require generating baseline knowledge to expose ocean regions and processes not yet constrained. As more of the deep ocean is explored, we gain important insight into scientifically and societally relevant questions including the distribution of ocean organisms and ecosystems, seafloor mineralization, chemical cycling, and the role of the oceans in global climate. Ocean exploration benefits from deep integration across disciplinary boundaries and careful coordination between stakeholders and explorers. This volume brings together scientists, engineers, and educators across disciplinary boundaries towards the common goal of mapping and characterizing unknown parts of the ocean. To meet the tremendous challenge of exploring the world's oceans will require the incorporation of new technologies and approaches that enhance the efficiency of exploration, adopt the latest developments in autonomy, and recognize the value of ocean exploration for society's benefit. This current topic provides an overview of the latest data, results, and innovations, along with an assessment of the current gaps in ocean exploration in order to focus the community's efforts and enhance the spread of current innovations. We invite contributions that describe advances in ocean exploration, including but not limited to: Assessments of and novel approaches to identifying exploration gaps and targets; Descriptions of novel vehicle systems that utilize autonomy and artificial intelligence to enhance ocean exploration; Development of new sensors and samplers that offer opportunities for scaling up ocean exploration and minimizing impact to ocean environments; Approaches to accessing difficult-to-reach and challenging subsea environments for exploration; The synergies of combining uncrewed systems with human expertise; New methods for analyzing and interpreting ocean data that create new scientific outcomes and enhance data use; Approaches to engaging a more diverse ocean exploration community, including the indigenous communities adjacent to ocean exploration targets; Evaluations of ocean exploration impact on issues of high societal relevance. **Sea Frontiers**, 1966 *Proceedings of the Indian Science Congress* Indian Science Congress Association, 1983 **Proceedings, Oceans '83**, 1983 *The Writers Directory*, 2013 *The Encyclopædia Britannica* Hugh Chisholm, James Louis Garvin, 1926
