Variants of Evolutionary Algorithms for Real-World Applications Raymond Chiong,Thomas Weise,Zbigniew Michalewicz,2011-11-13 Evolutionary Algorithms EAs are population based stochastic search algorithms that mimic natural evolution Due to their ability to find excellent solutions for conventionally hard and dynamic problems within acceptable time EAs have attracted interest from many researchers and practitioners in recent years This book Variants of Evolutionary Algorithms for Real World Applications aims to promote the practitioner s view on EAs by providing a comprehensive discussion of how EAs can be adapted to the requirements of various applications in the real world domains It comprises 14 chapters including an introductory chapter re visiting the fundamental question of what an EA is and other chapters addressing a range of real world problems such as production process planning inventory system and

supply chain network optimisation task based jobs assignment planning for CNC based work piece construction mechanical ship design tasks that involve runtime intense simulations data mining for the prediction of soil properties automated tissue classification for MRI images and database query optimisation among others These chapters demonstrate how different types of problems can be successfully solved using variants of EAs and how the solution approaches are constructed in a way that can be understood and reproduced with little prior knowledge on optimisation

Genetic Programming for Production Scheduling Fangfang Zhang,Su Nguyen,Yi Mei,Mengjie Zhang,2021-11-12 This book introduces readers to an evolutionary learning approach specifically genetic programming GP for production scheduling The book is divided into six parts In Part I it provides an introduction to production scheduling existing solution methods and the GP approach to production scheduling Characteristics of production environments problem formulations an abstract GP framework for production scheduling and evaluation criteria are also presented Part II shows various ways that GP can be employed to solve static production scheduling problems and their connections with conventional operation research methods In turn Part III shows how to design GP algorithms for dynamic production scheduling problems and describes advanced techniques for enhancing GP s performance including feature selection surrogate modeling and specialized genetic operators In Part IV the book addresses how to use heuristics to deal with multiple potentially conflicting objectives in production scheduling problems and presents an advanced multi objective approach with cooperative coevolution techniques or multi tree representations Part V demonstrates how to use multitask learning techniques in the hyper heuristics space for production scheduling It also shows how surrogate techniques and assisted task selection strategies can benefit multitask learning with GP for learning heuristics in the context of production scheduling Part VI rounds out the text with an outlook on the future Given its scope the book benefits scientists engineers researchers practitioners postgraduates and undergraduates in the areas of machine learning artificial intelligence evolutionary computation operations research and industrial engineering
