ABSTRACT. *This research paper presents an air pollution monitoring system using Internet of Things (IoT) technology. The system uses low-cost sensors to collect air quality data such as particulate matter (PM), carbon monoxide (CO), and nitrogen dioxide (NO2) from different locations in real-time. The data is then transmitted to a central server where it is processed and analysed using machine learning algorithms. The system also includes a web-based dashboard that displays the air quality index (AQI) of different locations, allowing users to monitor the pollution levels and take necessary actions. The proposed system has been evaluated in a real-world scenario, and the results show that it can provide accurate and reliable air quality information. This research contributes to the development of a cost-effective and scalable air pollution monitoring system that can be used in various applications, including smart cities, industrial monitoring, and environmental monitoring.*

Keywords: Air Pollution, Air pollution Monitoring System, Sensors, AQI

I. INTRODUCTION

1. PROJECT BACKGROUND

In the era of globalization challenges, health is an important factor in our lives. Various diseases involving respiratory such as asthma and cough, acute cardiovascular disease and adverse pregnancy outcomes can be acquired from polluted air. Besides that, air pollution could have the greatest impact on the environment. Global warming phenomena that threaten our earth in recent years is closely related to the level of air pollution that caused by vast amount of carbon emission from vehicle petrol and diesel combustion, waste from ever-expanding

production industry, uncontrolled combustion of fossil fuel and open-air burning in the waste management site. To address this problem, an IoT-based air pollution monitoring system can be developed. The system can use sensors to collect data on various air pollutants, including carbon monoxide, nitrogen oxides, sulfur dioxide, and particulate matter. The data collected can then be transmitted wirelessly to a cloud-based platform for analysis and visualization.

2. INDIA'S AIR POLLUTION

India is one of the countries with the highest levels of air pollution in the world. The main sources of air pollution in India include vehicular emissions, industrial activities, construction and demolition, open burning of waste, and the use of solid fuels for cooking and heating. The health impacts of air pollution in India are severe and widespread. According to a study published in *The Lancet*, air pollution in India caused 1.67 million deaths in 2019 alone. The study also found that air pollution is the third leading cause of death in India, after heart disease and dietary risks. The Indian government has taken several measures to address air pollution, including the implementation of the National Clean Air Programme (NCAP), which aims to reduce air pollution in 102 cities by 20-30% by 2024.
