Grimes, 2016-08-09 Carboranes Third Edition by Russell Grimes is the definitive resource on the subject Completely updated with a wealth of research and review articles published in this active field since the previous volume was released in 2011 the book provides a readable and concise introduction to the basic principles underlying the synthesis structures and reactions of carboranes heterocarboranes and metallacarboranes Following the valuable foundational information the book explores the advances in practical applications for the many areas in which experts have discovered that carboranes afford new possibilities for solving problems and advancing the science These disciplines include polymer science catalysis biomedicine nanomaterials and others Winner of a 2017 Textbook Excellence Award Texty from the Textbook and Academic Authors Association Includes over 2 000 molecular structure drawings throughout the text Features expanded coverage on applications of carboranes particularly in biomedicine and nanomaterials given the growth of research in these areas Presents extended and updated tables listing thousands of compounds with key literature references provided online via the

book's website Explores the advances in practical applications for the many areas in which experts have discovered that carboranes afford new possibilities for solving problems and advancing the science *The Chemical Bond* Gernot Frenking, Sason Shaik, 2014-07-08 A unique overview of the different kinds of chemical bonds that can be found in the periodic table from the main group elements to transition elements lanthanides and actinides It takes into account the many developments that have taken place in the field over the past few decades due to the rapid advances in quantum chemical models and faster computers This is the perfect complement to *Chemical Bonding Fundamentals and Models* by the same editors who are two of the top scientists working on this topic each with extensive experience and important connections within the community **Polyhedral Boranes and Carboranes as Versatile Species Employed in the Pursuit of Imaging Methods and of Nanostructured Materials** Sheila Michel, 2012 Polyhedral boranes and carboranes have

acquired their popularity for constructing meso and nano size structures for an array of applications from pharmaceuticals to material science These three dimensional boranes range from 4 to 22 boron atoms per molecule with delocalized bonding analogous to aromatic compounds The unique vibrational spectroscopy of the BH function allows for possible application of these species to bioimaging Silver nanoparticles functionalized with ortho carboranes have been reported for bioimaging using Surface enhanced Raman scattering SERS The silver nanoparticles were functionalized with antibodies specific to cancer cell receptors Bonding thiol substituted carboranes to these particles allowed for observation of enhanced Raman signals as the imaging mode Here attempts to synthesize second generation carborane molecules with additional Raman active group such as nitrile were conducted Hybrid diblock copolymers have the ability to self assemble in different morphological patterns depending on the type and ratio of monomers and the compatibilities in various solvents Linear hybrid diblock copolymers were synthesized by ring opening metathesis polymerization ROMP reactions with norbornenyl based decaborane and various amounts of norbornene and norbornenyl ester derivative monomers Their self assembly behaviour in various solvents were characterized by NMR TGA DSC and SEM P norbornene 60 b p norbornenyl decaborane 40 polymers showed lamellar morphology patterns when slowly evaporated from chloroform Based on results and the SEM images a few of these diblock copolymers were used as ceramic precursors and pyrolyzed to elevated temperatures forming boron nitride and boron carbonitride nano ordered ceramics

Boron Drahomír Hnyk, Michael McKee, 2015-12-17 This multi author edited volume reviews the recent developments in boron chemistry with a particular emphasis on the contribution of computational chemistry The contributors come from Europe the USA and Asia About 60% of the book concentrates on theoretical and computational themes whilst 40% is on topics of interest to experimental chemists Specific themes covered include structure topology modelling and prediction the role of boron clusters in synthetic chemistry and catalysis as medical agents when acting as inhibitors of HIV protease and carbonic anhydrases *Chemistry of Decaborane and Higher Polyhedral Boranes* Norman N. Michael P. Mingos,2022-01-01 The 50 Year Anniversary of the development of electron counting paradigms for polyhedral molecules is celebrated in two volumes of Structure and Bonding Volume 1 covers the historical development theoretical models and applications to boranes and metalloboranes *The Electronic Structure of the Polyhedral Boranes* Valerie Tomlinson,1968 *The Borane, Carborane, Carbocation Continuum* Joseph Casanova,1998-04-29 Lipscomb to illustrate the results of research on the structures and bonding characteristics of boranes carboranes and carbocations Advances in Boron and the Boranes Joel F. Pancharatna,2003 *Computational Inorganic and Bioinorganic Chemistry* Edward I. Solomon,Robert A. Scott,R. Bruce King,2009-10-19 Over the past several decades there have been major advances in our ability to computationally evaluate the electronic structure of inorganic molecules particularly transition metal systems This advancement is due to the Moore s Law increase in computing power as well as the impact of density functional theory DFT and its implementation in commercial and freeware programs for quantum chemical calculations Improved pure and hybrid density functionals are allowing DFT calculations with accuracy comparable to high level Hartree Fock treatments and the results of these calculations can now be evaluated by experiment When calculations are correlated to and supported by experimental data they can provide fundamental insight into electronic structure and its contributions to physical properties and chemical reactivity This interplay continues to expand and contributes to both improved value of experimental results and improved accuracy of computational predictions The purpose of this EIC Book is to provide state of the art presentations of quantum mechanical and related methods and their applications written by many of the leaders in the field Part 1 of this volume focuses on methods their background and implementation and their use in describing bonding properties energies transition states and spectroscopic features Part 2 focuses on applications in bioinorganic chemistry and Part 3 discusses inorganic chemistry where electronic structure calculations have already had a major impact This addition to the EIC Book series is of significant value to both experimentalists and theoreticians and we anticipate that it will stimulate both further development of the methodology and its applications in the many interdisciplinary fields that comprise modern inorganic and bioinorganic chemistry This volume is also available as part of Encyclopedia of Inorganic Chemistry 5 Volume Set This set combines all volumes published as EIC Books from 2007 to 2010 representing areas of key developments in the field of inorganic chemistry published in the Encyclopedia of Inorganic Chemistry Find out more at http://eu.wiley.com/WileyCDA/WileyTitle/productCd_1119994284.html **Russian Chemical Reviews** ,1986 **Horizons in Organometallic Chemistry** Ivan Bernal,1974 Polyhedron ,1990 **Chemtracts** ,2005
