## **Practical Realtime Enterprise:**

The Practical Real-Time Enterprise Bernd Kuglin, Heinz Thielmann, 2005-08-15 Speed as a factor for success Our modern industrial society lives life in the fast lane The catchwords faster shorter more powerful reflect what we experience in almost all aspects of our lives Whether at home or at work we are constantly on the move and in a rush In our private lives we find rapid exchange of information most entertaining and we are fascinated by the wide range of information that pours in on us from all around the world mainly via the new media It gives us the feeling of being a part of the action everywhere and all the time Seldom are we aware that the only reason this flood of information often referred to as overstimulation does not lead to overkill is that we manage to organize our time effectively There are many parallels to this in the business world Here too a great deal of time pressure is exerted from outside goals are set ever higher and deadlines become tighter In other words demands on our time demand faster reaction Crucial information travels around the globe across all time zones in a matter of seconds In fact instead of CET or CEST it would make sense to have a single time zone for the worldwide network called GST for Global Simultaneous Time In business more so than in private life we are almost constantly online

The Practical Real-Time Enterprise Bernd Kuglin, 2005-02-21 The basic idea of the real time enterprise is to become quicker A business which wants to become a real time enterprise has to acquire three main abilities Internal and external data is integrated quickly and in real time in a well organized company data pool Analyses of information in the company data pool can be obtained in real time across function boundaries and at the touch of a button The number of working steps performed in batch mode is shifting dramatically in favor of immediate completion in real time The issue of communications or real time communications plays a special role here Studies have shown that processing times sometimes double when necessary communication events are handled in batch mode in the business process and not in real time In other words when an activity cannot be completed and lies around for days because an urgently needed partner cannot be contacted The necessity of acquiring these three abilities has implications for the process related technical and organizational aspects of a business that are dealt with in detail in this book

Business Intelligence for the Real-Time Enterprises Christoph Bussler, Malu Castellanos, Umeshwar Dayal, Sham Navathe, 2007-08-22 This book constitutes the thoroughly refereed post proceedings of the First International Workshop on Business Intelligence for the Real Time Enterprise BIRTE 2006 held in Seoul Korea in September 2006 in conjunction with VLDB 2006 the International Conference on Very Large Data Bases The papers discuss the five major aspects of business intelligence for the real time enterprise
