Pricing Communication Networks Economics Technology And Modelling:

Pricing Communication Networks Costas Courcoubetis, Richard Weber, 2003-07-25 Traditionally engineers devised communication services without reference to how they should be priced In today s environment pricing is a very complex subject and in practice depends on many parameters of the actual market including amount of traffic architecture of the network technology and cost The challenge is to provide a generic service model which accurately captures aspects such as quality and performance and can be used to derive optimal pricing strategies Recent technology advances combined with the deregulation of the telecommunication market and the proliferation of the internet have created a highly competitive environment for communication service providers Pricing is no longer as simple as picking an appropriate model for a particular contract There is a real need for a book that explains the provision of new services the relation between pricing and resource allocation in networks and the emergence of the internet and how to price it Pricing Communication Networks provides a framework of mathematical models for pricing these multidimensional contracts and includes background in network services and contracts network technology basic economics and pricing strategy It can be used by economists to fill in the gaps in their knowledge of network services and technology and for engineers and operational researchers to gain the background in economics required to price communication services effectively Provides a broad overview of network services and contracts Includes a primer on modern network technology and the economic concepts relevant to pricing and competition Includes discussion of mathematical models of traffic flow to help describe network capability and derive pricing strategies Includes coverage of specialist topics such as regulation multicasting and auctions Illustrated throughout by detailed real examples Suitable for anyone with an understanding of basic calculus and probability Primarily aimed at graduate students researchers and practitioners from electrical engineering computer science economics and operations research Pricing Communication Networks will also appeal to telecomms engineers working in industry **Performance Models and Risk Management in Communications Systems** Nalân Gülpınar, Peter G. Harrison, Berc Rustem, 2010-11-02 This volume covers recent developments in the design operation and management of telecommunication and computer network systems in performance engineering and addresses issues of uncertainty robustness and risk Uncertainty regarding loading and system parameters leads to challenging optimization and robustness issues Stochastic modeling combined with optimization theory ensures the optimum end to end performance of telecommunication or computer network systems In view of the diverse design options possible supporting models have many adjustable parameters and choosing the best set for a particular performance objective is delicate and time consuming An optimization based approach determines the optimal possible allocation for these parameters Researchers and graduate students working at the interface of telecommunications and operations research will benefit from this book Due to the practical approach this book will also serve as a reference tool for scientists and engineers in telecommunication and computer networks who depend upon optimization **Management**

of Multimedia Networks and Services Jordi Dalmau Royo,Go Hasegawa,2005-10-18 We are delighted to present the proceedings of the 8th IFIP IEEE International Conference on Management of Multimedia Networks and Services MMNS 2005 The MMNS 2005 conference was held in Barcelona Spain on October 24 26 2005 As in previous years the conference brought together an international audience of researchers and scientists from industry and academia who are researching and developing state of the art management systems while creating a public venue for results dissemination and intellectual collaboration This year marked a challenging chapter in the advancement of management systems for the wider management research community with the growing complexities of the so called multimedia over Internet the proliferation of alternative wireless networks WLL WiFi and WiMAX and 3G mobile services intelligent and high speed networks scalable multimedia services and the convergence of computing and communications for data voice and video delivery Contributions from the research community met this challenge with 65 paper submissions 33 high quality papers were subsequently selected to form the MMNS 2005 technical program The diverse topics in this year s program included wireless networking technologies wireless network applications quality of services multimedia Web applications overlay network management and bandwidth management *Encyclopedia of Internet Technologies and Applications* Freire, Mario,Pereira, Manuela,2007-10-31

Internet Transport Economics Richard T. B. Ma,2022-11-02 This book presents Internet transport economics as a new approach to understanding the packet switching paradigm of Internet infrastructure as a global transport system for data packets It is a prescient view of the Internet s evolution into a content centric service platform where the quality of services QoS cannot be guaranteed due to the tens of thousands of autonomous systems that enact business decisions on peering routing and pricing in a way that determines aspects of the Internet ecosystem like network topology latency and throughput of traffic flows and performance of network applications The trafficking issues created in this environment are a critical concern and barrier for user applications that require real time responses such as telesurgery and teleoperation of autonomous vehicles and the book presents the Internet transport economics model as the solution While engineering and business are the prevailing lenses through which the Internet is viewed the book builds its

methodological framework around transport Further delving into economics it establishes how the Internet can be understood as providing transport services for data packets whose demand and supply are driven by the QoS metrics of delay and loss which can be regarded as congestion costs that result in equilibrium rates of traffic flows sent by content providers CPs The book goes on to present a stylized model of content provider to access provider CP AP service as well as congestion equilibrium and rate equilibrium solution concepts under the Internet transport economics framework These are used to analyze the problem domains of service differentiation market structure and data pricing Finally it discusses various potential future applications This book will be of interest to graduate students and researchers in areas of computer networking and performance evaluation
