## **Practical Work In School Science Which Way Now:**

**Practical Work in School Science** Jerry Wellington, 2002-01-22 Practical work has been part of science education for just over 100 years and is accepted as an essential and exciting part of understanding this discipline. Although it can be costly and sometimes messy, it simply has to be done if students and teachers are to progress in their understanding. Schools and universities invest millions of pounds in it, and the National Curriculum reveres it, but what exactly is going on in classrooms around the country, and how are the leading practitioners moving with the times? This book attempts to reflect on the value and purpose of practical work as part of the scientific curriculum. Why are practical exercises so necessary, and what do they contribute to the learning process? The chapters examine many issues, such as how practical work is perceived by students and teachers, whether we will move on to the virtual lab, the limitations of current hands-on work, and valuable alternatives to it, the connections between practical work in science education and authentic science, what role experimentation plays in current educational practice. Jerry Wellington is Reader in Education at Sheffield University and has taught science at all academic levels.

*Beyond Cartesian Dualism* Steve Alsop, 2006-02-15 There is surprisingly little known about affect in science education. Despite periodic forays into monitoring students' attitudes toward science, the effect of affect is too often overlooked. *Beyond Cartesian Dualism* gathers together contemporary theorizing in this axiomatic area. In fourteen chapters, senior scholars of international standing use their knowledge of the literature and empirical data to model the relationship between cognition and affect in science education. Their revealing discussions are grounded in a broad range of educational contexts, including school classrooms, universities, science centres, travelling exhibits, and refugee camps, and explore an array of far-reaching questions: What is known about science teachers and students' emotions? How do emotions mediate and moderate instruction? How might science education promote psychological resilience? How might educators engage affect as a way of challenging existing inequalities and practices? This book will be an invaluable resource for anybody interested in science education research, and more generally in research on teaching, learning, and affect. It offers educators and researchers a challenge to recognize the mutually constitutive nature of cognition and affect.

*Improving Secondary Science Teaching* John Parkinson, 2004 John Parkinson encourages teachers to reflect on their current teaching practice and guides them to improving their teaching and consequently their pupils' learning.
