Price Of Smoking:

United States Tobacco Journal, 1930 **The Price of Smoking** Frank A. Sloan, Jan Ostermann, Christopher Conover, Donald H. Taylor, Gabriel Picone, 2006-08-11 What does a pack of cigarettes cost a smoker the smoker's family and society This longitudinal study on the private and social costs of smoking calculates that the cost of smoking to a 24 year old woman smoker is 86 000 over a lifetime for a 24 year old male smoker the cost is 183 000 The total social cost of smoking over a lifetime including both private costs to the smoker and costs imposed on others including second hand smoke and costs of Medicare Medicaid and Social Security comes to 106 000 for a woman and 220 000 for a man The cost per pack over a lifetime of smoking almost 40 00 The first study to quantify the cost of smoking in this way or in such depth this accessible book not only adds a weapon to the arsenal of antismoking messages but also provides a framework for assessment that can be applied to other health behaviors The findings on the effects of smoking on Medicare and Medicaid will be surprising and perhaps controversial for the authors estimate the costs to be much lower than the damage awards being paid to 46 states as a result of the 1998 Master Settlement Agreement **Price, Tobacco Control Policies and Youth Smoking** Frank J. Chaloupka, Michael Grossman, 1996 This paper examines effectiveness of several tobacco control policies in discouraging cigarette smoking among youths These policies include increased cigarette excise taxes which result in higher cigarette prices restrictions on smoking in public places and at private worksites and limits on the availability of tobacco products to youths The data employed in this research are taken from the 1992 1993 and 1994 surveys of eighth tenth and twelfth grade students conducted by the University of Michigan's Institute for Social Research as part of the Monitoring the Future Project Site specific cigarette prices and measures of tobacco related policies are added to the survey data The results indicate that tobacco control policies can be effective in reducing youth cigarette smoking The average overall estimated price elasticity of youth cigarette demand of 1 313 indicates that large increases in cigarette excise taxes would lead to sharp reductions in youth smoking Similarly strong restrictions on smoking in public places would reduce the prevalence of smoking among youths while limits on smoking in schools would reduce average cigarette consumption among young smokers However limits on youth access to tobacco products appear to have little impact on youth cigarette smoking This is most likely the result of the relatively weak enforcement of these laws **Stumpage and Log Prices for the Calendar Year 1935** Anne Dewees Taylor, Henry Bake Steer, Robert V.
