Managing Disaster:

Managing Disaster Louise Kloos Comfort, 1988 This book reflects an important shift in society's definition of disaster. For centuries catastrophic events have been considered acts of God and therefore uncontrollable by definition. Managing Disaster is international in scope covering such natural and man-made calamities as tornadoes in western Pennsylvania, earthquakes in Peru, flooding in the Netherlands, and toxic waste disasters. Centers for hazard studies have only recently examined the interrelated aspects of disastrous events and recognized the interaction between natural hazards and human systems. As society attempts to acquire the information and develop the skills to reduce the risks and damage from disaster, an increasingly professional public service is reconsidering its strategies and policy direction. Managing Disaster addresses this problem and the need for a new approach to teaching this subject at the university level. Twenty-three professionals and scholars in public policy and administration from universities, government, and the private sector examine the basic issues confronting managers and public agencies in the face of disaster.

Approaches to Managing Disaster John Tiefenbacher, 2012-03-14 Approaches to Managing Disaster: Assessing Hazards, Emergencies, and Disaster Impacts demonstrates the array of information that is critical for improving disaster management. The book reflects major management components of the disaster continuum: the nature of risk, hazard, vulnerability, planning, response, and adaptation in the context of threats that derive from both nature and technology. The chapters include a selection of original research reports by an array of international scholars focused either on specific locations or on specific events. The chapters are ordered according to the phases of emergencies and disasters. The text reflects the disciplinary diversity found within disaster management and the challenges presented by the co-mingling of science and social science in their collective efforts to promote improvements in the techniques, approaches, and decision making by emergency response practitioners and the public. This text demonstrates the growing complexity of disasters and their management as well as the tests societies face every day.

Managing Disaster Risk in Emerging Economies Alcira Kreimer, Margaret Arnold, 2000-01-01 In 1999 natural catastrophes and man-made disasters claimed more than 105,000 lives, 95 percent of them in the developing world and caused economic losses of around US 100 billion. In 1998 the twin disasters of the Yangtze and Hurricane Mitch accounted for two-thirds of the US 65 billion loss. The geographical areas affected may vary, but one constant is that the per capita burden of catastrophic losses is dramatically higher in developing countries. To respond to an increased demand to assist disaster recovery programmes, the World Bank set up the Disaster Management Facility in 1998 to help provide the Bank with a more rapid and strategic response to disaster emergencies. The DMF focuses on risk identification, risk reduction, and risk sharing, transfer the three major topics in this volume. The DMF also promotes strategic alliances with key private government, multilateral, and nongovernmental organisations to ensure the inclusion of disaster risk reduction as a central value of development. The most important of these partnerships is the ProVentio Consortium, launched in February 2000.
