# Functional Equations

## Part II

SHUBORNO DAS

In Part I, I explained the different techniques to solve functional equations. In most cases, the steps to solve them are similar to those in solving algebraic equations. However there is one scenario where using the algebraic method to solve a functional equation may lead to an incomplete solution; i.e., only a subset of functions that solve the FE may be identified and not the complete list. This error is known as pointwise trap. In Part II of the two-part article on functional equations, we discuss the notion of pointwise trap and learn different ways to overcome it.

### Pointwise Trap

**What is a 'pointwise trap'?** Consider the following example:

Find all functions  $f: \mathbb{R} \rightarrow \mathbb{R}$  such that  $f(x)^2 = xf(x)$ .

Factorising the equation  $f(x)^2 - xf(x) = 0$  gives  $f(x)(f(x) - x) = 0$ . Solving it like a normal equation would yield  $f(x) = 0$  for all  $x$  or  $f(x) = x$  for all  $x$ .

Is this the complete list of functions that solve the FE?

Consider a function  $f(x)$  defined as follows:  $f(x) = x$  for all  $x$  except  $f(5) = 0$ . If  $x \neq 5$ , then  $f(x) - x = 0 \implies f(x)^2 = xf(x)$ . If  $x = 5$ , then  $f(x) = 0 \implies f(x)^2 = xf(x)$ . So clearly this function also satisfies the FE. This proves that our earlier list of functions that satisfy the FE was incomplete.

It is not too difficult to deduce that there are infinitely many solutions to this FE. Refer Figure 1 as another example of such a function that satisfies the FE.

Figure 1. Example of a function solving the equation  $f(x)^2 = xf(x)$

**On Functions and Functional Equations** Smital,2020-08-26 On Functions and Functional Equations introduces the main topics in iteration theory and the theory of functional equations with emphasis on applications in the fields of mathematics physics biology chemistry and electronics and mechanical engineering The book contains many classical results as well as important more recent results It also includes numerous exercise and some problems that have yet to be resolved The book is accessible to readers having a secondary level mathematical education [Lectures on Functional Equations and Their Applications](#) J. Aczel,Hansjorg Oser,2006-02-01 Numerous detailed proofs highlight this treatment of functional equations Starting with equations that can be solved by simple substitutions the book then moves to equations with several unknown functions and methods of reduction to differential and integral equations Also includes composite equations equations with several unknown functions of several variables vector and matrix equations more 1966 edition *Functional Equations and How to Solve Them* Christopher G. Small,2007-04-03 Over the years a number of books have been written on the theory of functional equations However very little has been published which helps readers to solve functional equations in mathematics competitions and mathematical problem solving This book fills that gap The student who encounters a functional equation on a mathematics contest will need to investigate solutions to the equation by finding all solutions or by showing that all solutions have a particular property The emphasis here will be on the development of those tools which are most useful in assigning a family of solutions to each functional equation in explicit form At the end of each chapter readers will find a list of problems associated with the material in that chapter The problems vary greatly with the easiest problems being accessible to any high school student who has read the chapter carefully The most difficult problems will be a reasonable challenge to advanced students studying for the International Mathematical Olympiad at the high school level or the William Lowell Putnam Competition for university undergraduates The book ends with an appendix containing topics that provide a springboard for further investigation of the concepts of limits infinite series and continuity [Introduction to Functional Equations](#) Costas Efthimiou,2011-10-13 Functions and their properties have been part of the rigorous precollege curriculum for decades And functional equations have been a favorite topic of the leading national and international mathematical competitions Yet the subject has not received equal attention by authors at an introductory level The majority of the books on the topic remain unreachable to the curious and intelligent precollege student The present book is an attempt to eliminate this disparity The book opens with a review chapter on functions which collects the relevant foundational information on functions plus some material potentially new to the reader The next chapter presents a working definition of functional equations and explains the difficulties in trying to systematize the theory With each new chapter the author presents methods for the solution of a particular group of equations Each chapter is complemented with many solved examples the majority of which are taken from mathematical competitions and professional journals The book ends with a

chapter of unsolved problems and some other auxiliary material The book is an invaluable resource for precollege and college students who want to deepen their knowledge of functions and their properties for teachers and instructors who wish to enrich their curricula and for any lover of mathematical problem solving techniques In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people their parents and teachers and the mathematics profession

Debrecen founded in 1953 and by the *Aequationes Mathematicae* founded in 1968 because these journals published papers from the field of functional equations readily and frequently. The latter journal also publishes the yearly report of the International Symposia on Functional Equations and a comprehensive bibliography of the most recent papers. At the same time there are periodically and traditionally organized conferences in Poland and in Hungary devoted to functional equations and inequalities. In 2000 the 38th International Symposium on Functional Equations was organized by the Institute of Mathematics and Informatics of the University of Debrecen in Noszvaj, Hungary. The report about this meeting can be found in *Aequationes Math* 61 (2001) 281–320.

**Linear Functional Equations. Operator Approach** Anatolij

Antonevich, 2012-12-06 In this book we shall study linear functional equations of the form  $m \cdot u(x) + \sum_{k=1}^n a_k u(f_k(x)) = l(x)$  where  $U$  is an unknown function from a given space  $F(X)$  of functions on a set  $X$ .  $Q_k: X \rightarrow X$  are given mappings,  $a_k$  and  $f$  are given functions. Our approach is based on the investigation of the operators given by the left hand side of equation (1). In what follows such operators will be called functional operators. We will pay special attention to the spectral properties of functional operators: first of all to invertibility and the Noether property. Since the set  $X$ , the space  $F(X)$ , the mappings  $Q_k$  and the coefficients  $a_k$  are arbitrary, the class of operators of the form (1) is very rich and some of its individual representatives are related with problems arising in various areas of mathematics and its applications. In addition to the classical theory of functional equations, among such areas one can indicate the theory of functional differential equations with deviating argument, the theory of nonlocal problems for partial differential equations, the theory of boundary value problems for the equation of a vibrating string and equations of mixed type, a number of problems of the general theory of operator algebras and the theory of dynamical systems, the spectral theory of automorphisms of Banach algebras and other problems.

Functional Equations in Applied Sciences Enrique Castillo, Andres Iglesias, Reyes Ruiz-Cobo, 2004-11-04 The book provides the reader with the different types of functional equations that s/he can find in practice, showing step by step how they can be solved. A general methodology for solving functional equations is provided in Chapter 2. The different types of functional equations are described and solved in Chapters 3 to 8. Many examples coming from different fields as geometry, science, engineering, economics, probability, statistics, etc. help the reader to change his/her mind in order to state problems as functional equations as an alternative to differential equations and to state new problems in terms of functional equations or systems. An interesting feature of the book is that it deals with functional networks, a powerful generalization of neural networks that allows solving many practical problems. The second part of the book, Chapters 9 to 13, is devoted to the applications of this important paradigm. The book contains many examples and end of chapter exercises that facilitate the understanding of the concepts and applications.
