Management Of Epilepsy:

Evidence-based Management of Epilepsy Steven C Schachter,2011-09-01 The clinical management of patients with epilepsy and the associated medical literature are rapidly evolving Evidence based Management of Epilepsy differs from other epilepsy textbooks by focusing specifically on topics where the available evidence is sufficiently well developed to be synthesized into straightforward summaries of proven therapies When evidence is missing or there is doubt controversy or ambiguity the distinguished authors offer treatment recommendations based on practice guidelines or consensus statements that span the gaps in evidence while pointing to those areas where further research is needed The initial chapters cover critically important aspects of antiepileptic drugs AEDs and surgical treatment such as when to start and stop AEDs how to monitor their effectiveness special considerations in women who become pregnant and when to consider surgery to alleviate seizures The following chapters cover the therapy of seizures when they develop after traumatic brain injury or stroke and the treatment of concomitant depression and anxiety in patients with epilepsy The final chapters discuss emerging topics in epilepsy the treatment of the postictal state technologies to predict and detect seizures strategies for closing the treatment gap and sudden unexpected death in epilepsy The contributors are renowned experts in their fields who successfully and succinctly present state of the art reviews based on the medical evidence designed to help the clinician be as best informed as possible in the care of patients with epilepsy

leading to muscle spasms convulsions or even loss of consciousness In practice epilepsy is characterized by seizures in which neurons fire signals repeatedly It is reported that during a seizure the neural system can produce more than 500 signals within a second and this attributable to the abnormal activity of the nerve clusters in the brain Historically epilepsy is known as the oldest mental illness to be identified by man It dates back to 400 B C when Hippocrates described it as a brain disorder Currently epilepsy has become an enormous challenge to the global public healthcare because it is not curable This implies that the management of epilepsy poses challenge to physicians although surgery techniques and medicines help in controlling seizures in 80 percent of epileptic patients It is estimated that 2.5 million individuals in the US have been diagnosed with epilepsy However experiencing a single seizure does not necessarily suggest epilepsy This is why a comprehensive diagnosis is required in determining epilepsy and the different forms of seizures in order to adopt the most appropriate treatment option
