*Readings in Accounting for Management Control* David Otley and Kenneth Merchant Clive Emmanuel, 2013-12-19  
This collection contains the main journal articles necessary to complement and support the established second edition of *Accounting for Management Control*. The success of the text stems from the authors' commitment to examining management accounting in an organizational and behavioural context. Only in this way can the contribution to the management control system be evaluated. The articles contained in this volume follow the structure and content of the main book providing deeper insights into those fundamental issues of accounting control systems design and indicating the direction of future developments in research. The collection contains articles with a variety of perspectives and range from as early as the 1950s through to the present. The inclusion of all these papers in one volume gives the student easier access to the body of work upon which the main text is based. A teacher's manual to be used in conjunction with the main text is also available. This book should be of interest to senior undergraduate students of accounting and finance and university and polytechnic libraries.

 Choice In response to the expanding roles of accountants in all types of organizations cost accounting is becoming  
 increasingly multidimensional relying not only on traditional accounting principles but also on behavioral organizational  
 decisional and other foundations These conceptual foundations and their applications to cost accounting practices form the  
 basis of this handbook which offers both accounting students and professionals a comprehensive review and interpretation of  
 cost accounting techniques and theories By treating both traditional and newer dimensions of the discipline the book defines  
 a new scope and boundary that presents cost accounting in a multidimensional framework Ahmed Belkaoui presents his  
 material from three different perspectives First he shows how the fields of cost accounting economics behavioral science  
 operations research statistics and mathematics provide the tools as well as the concepts necessary for the classification  
 accumulation and reporting of relevant data for internal decision making and for the interpretation and evaluation of  
 resulting decisions Second he demonstrates how standard cost accounting techniques can be complemented by other  
 possible approaches to problems stressing not only the descriptive but also the normative solutions to cost accounting  
 problems Finally he examines how cost accounting techniques affect the planning and control of routine and nonroutine  
 decisions inventory valuation and income determination Among the major new developments addressed are variance analysis  
 learning phenomena in cost estimation flexible manufacturing systems and behavioral considerations in cost allocation This  
 work will be especially valuable for professional accountants and graduate students preparing for an accounting career and  
 an important resource for academic and public libraries Knowledge-based Management Support Systems Georgios I.
