On Human Ecology

Roderick Duncan MACKENZIE

On Human Ecology:

Human Ecology Amos H. Hawley, 1986-11-15 *Human Ecology A Theoretical Essay* by Amos Hawley presents for the first time a unified theory of human ecology by a scholar whose name is virtually synonymous with the discipline Focused on the interaction between society and environment human ecology is an attempt to deal holistically with the phenomenon of human organization Beginning in the first quarter of the century sociologists such as Park Burgess and McKenzie developed the study of human ecology to account for the dynamics of change in American cities Over time theorists have reached beyond the boundaries of sociology drawing on the findings of economics political science anthropology and bioecology to understand the relationship of human beings to their environment Hawley has successfully integrated the scattered theses of this wide ranging discipline into a schematic whole The early human ecologists seized on the analogy of plant communities as a way of understanding urban communities Hawley here maintains that the most important contribution to human ecology of the lexicons of plant and animal ecologies is the perspective of collective life as an adaptive process consisting in an interaction of environment population and organization From the adaptive process he argues emerges the ecosystem a concept that serves as a common denominator for bioecology and human ecology Hawley has codified the theory of human ecology by a set of deductive hypotheses that establish its claims to coherence and comprehensiveness His model charts a synthesis of ecological concepts ranging from adaptation and equilibrium through growth in temporal and spatial dimensions to convergence and openness The essay underscores the critical importance of transportation and communication technology to the shaping of the human ecological system *Human Ecology* brings concision and elegance to this holistic perspective and will serve as a point of reference and orientation for anyone interested in the powers and scope of the ecological approach

Introduction to Human Ecology University of Illinois at Urbana-Champaign. Committee on Human Ecology, 1964

Human Ecology Gerald G. Marten, 2010-09-23 The scope and clarity of this book make it accessible and informative to a wide readership Its messages should be an essential component of the education for all students from secondary school to university It provides a clear and comprehensible account of concepts that can be applied in our individual and collective lives to pursue the promising and secure future to which we all aspire From the Foreword by Maurice Strong Chairman of the Earth Council and former Secretary General of the United Nations Conference on Environment and Development Earth Summit The most important questions of the future will turn on the relationship between human societies and the natural ecosystems on which we all in the end depend The interactions and interdependencies of the social and natural worlds are the focus of growing attention from a wide range of environmental social and life sciences Understanding them is critical to achieving the balance involved in sustainable development *Human Ecology Basic Concepts for Sustainable Development* presents an extremely clear and accessible account of this complex range of issues and of the concepts and tools required to understand and tackle them Extensively supported by graphics and detailed examples this book makes an excellent

introduction for students at all levels and for general readers wanting to know why and how to respond to the dilemmas we face

Human Ecology Frederick R. Steiner, 2016-02-16 Humans have always been influenced by natural landscapes and always will be even as we create ever larger cities and our developments fundamentally change the nature of the earth around us In *Human Ecology* noted city planner and landscape architect Frederick Steiner encourages us to consider how human cultures have been shaped by natural forces and how we might use this understanding to contribute to a future where both nature and people thrive Human ecology is the study of the interrelationships between humans and their environment drawing on diverse fields from biology and geography to sociology engineering and architecture Steiner admirably synthesizes these perspectives through the lens of landscape architecture a discipline that requires its practitioners to consciously connect humans and their environments After laying out eight principles for understanding human ecology the book's chapters build from the smallest scale of connection our homes and expand to community scales regions nations and ultimately examine global relationships between people and nature In this age of climate change a new approach to planning and design is required to envision a livable future *Human Ecology* provides architects landscape architects urban designers and planners and students in those fields with timeless principles for new creative thinking about how their work can shape a vibrant resilient future for ourselves and our planet

Ecology and Experience Richard J. Borden, 2014-04-15 A philosophical and narrative memoir *Ecology and Experience* is a thoughtful engaging recounting of author Richard J Borden's life entwined in an overview of the intellectual and institutional history of human ecology a story of life wrapped in a life story Borden shows that attempts to bridge the mental and environmental arenas are uncertain but that rigid conventions and narrow views have their dangers too Human experience and the natural world exist on many levels and gathering from both realms gives rise to novel constellations In a blend of themes and approaches based on a lifetime of interdisciplinary inquiry the author wanders these intersections and invites us to exercise our capacities for ecological insight to deepen the experience of being alive and most of all to more fully enrich our lives

Human Ecology Daniel G. Bates, Judith Tucker, 2010-03-29 This book arose from the need to develop accessible research based case study material which addresses contemporary issues and problems in the rapidly evolving field of human ecology Academic political and indeed public interest in the environmental sciences is on the rise This is no doubt spurred by media coverage of climate change and global warming and attendant natural disasters such

as unusual drought and flood conditions toxic dust storms pollution of air and water and the like But there is also a growing intellectual awareness of the social causes of anthropogenic environmental impacts political vectors in determining conservation outcomes and the role of local representations of ecological knowledge in resource management and sustainable yield production This is reflected in the rapid increase of ecology courses being taught at leading universities in the fast growing developing countries much as was the case a decade or two ago in Europe and North America The research presented here is all taken from recent issues of *Human Ecology An Interdisciplinary Journal* Since the journal itself is a leading forum for contemporary research the articles we have selected represent a cross section of work which brings the perspectives of human ecology to bear on current problems being faced around the world The chapters are organized in such a way to facilitate the use of this volume either to teach a course or to introduce an informed reader to the field
