

## 2 Emergence of Modern Astronomy

Modern astronomy has deep historical roots. The main path of development for astronomy begins with the ancient Babylonians. Greek astronomers built on the observations of the Babylonians, creating a science of astronomy that was mathematical and deductive in nature. Ancient knowledge about the heavens was preserved and expanded during medieval times by Arabic scientists. During the Renaissance, the heliocentric theory of Copernicus led to additional advances by scientists such as Galileo and Kepler. This lineage, Babylonians to Greeks to Arabs to Europeans, is a great oversimplification of the rich history of astronomy. However, in a single chapter, we have only enough space for a broad overview of how modern astronomy evolved.

### 2.1 ■ EARLY GREEK ASTRONOMY

Of the nine muses of classical mythology, eight dealt with various forms of music, dance, and poetry; the ninth muse, Urania, was the Muse of Astronomy. This is indicative of the ancient Greek approach to astronomy: the motions of Sun, Moon, and planets were regarded as a type of cosmic dance, revealing an underlying rhythm and harmony. A main goal of ancient Greek astronomers was to build, using deductive reasoning and mathematical computations, a conceptual model for the universe that explained the (sometimes complicated) motions of celestial bodies. To provide a bit of clarification, when historians of science talk about “ancient Greek astronomy,” they aren’t talking solely about developments in the geographical region currently called Greece. Rather, they embrace the entire Greek-speaking world, which in Hellenistic times, after the conquests of Alexander the Great, embraced much of the Mediterranean basin and the Near East.

Our knowledge of Greek astronomy, particularly in the time prior to Aristotle, is sadly fragmentary, due to the incompleteness of the written record. Many early Greek astronomical works are lost and are known to have existed only because they were cited by later writers. Some general aspects of Greek astronomy are well established, however. For instance, the Greeks were the first known culture to realize that the sky is three-dimensional; that is, it has a significant depth. Earlier societies, such as the Babylonians and Egyptians, thought that the sky was a thin, solid dome, arching over a flat Earth. The most famous written description of such a domed universe is in the first book of Genesis:
