## **Management Of Radioactive Wastes:**

*Radioactive Waste Management In The 21st Century* William R Roy,2021-06-10 The safe management of radioactive wastes is of paramount importance in gaining both governmental and societal support for nuclear energy The scope of this new textbook is to provide a comprehensive perspective on all types of radioactive wastes as to how they are created classified characterized and disposed Written to emphasize how geology and radionuclide chemistry impact waste management this book is primarily designed for engineers who have little background in geology with low level wastes decommissioning wastes high level wastes and spent nuclear fuel This textbook provides the most up to date information available on waste management in several countries The content of this work includes transporting radioactive materials to disposal facilities The textbook cites numerous case studies to illustrate past practices current methodologies and to provide insights on how radioactive wastes may be managed in the future An international perspective on waste management is also provided to help the readers better understand the diversity in approaches while highlighting what many countries have in common Review questions for classroom use are provided at the end of each chapter Related Link s [Improving the Regulation and Management of Low-Activity Radioactive Wastes](#) National Research Council,Division on Earth and Life Studies,Board on Radioactive Waste Management,Committee on Improving Practices for Regulating and Managing Low-Activity Radioactive Wastes,2003-10-14 Low activity radioactive wastes include a broad spectrum of materials for which a regulatory patchwork has evolved over almost 60 years These wastes present less of a radiation hazard than either spent nuclear fuel or high level radioactive waste Low activity wastes however may produce potential radiation exposure at well above background levels and if not properly controlled may represent a significant chronic and in some cases an acute hazard For some low activity wastes the present system of controls may be overly restrictive but it may result in the neglect of others that pose an equal or higher risk The purpose of this interim report is to provide an overview of current low activity waste regulations and management practices Improving the Regulation and Management of Low Activity Radioactive Wastes Interim Report on Current Regulations Inventories and Practices identifies gaps and inconsistencies that suggest areas for improvements The final report will assess options for improving the current practices and provide recommendations

**Radioactive Waste Management** ,1995-04 *Radioactive Waste Management, Second Edition* James Saling,2001-11-07 This reviews sources of radioactive waste and introduces radioactive decay and radiation shielding calculations It covers technical and regulatory aspects of waste management with discussion questions at the end of each chapter to provide an opportunity to explore the many facets of waste management issues An extensive reference list at the end of each chapter retains the references from the first edition of the book and incorporates references used in preparing this revised text giving readers an opportunity to look at historical records as well as current information **Management of Radioactive Wastes** Colin Ashley Mawson,1965 *Low-Level Radioactive Waste Management and Disposition* National

Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Nuclear and Radiation Studies Board, Planning Committee on Low-Level Radioactive Waste Management and Disposition: A Workshop, 2017-06-05 The Department of Energy's Office of Environmental Management DOE is responsible for the safe cleanup of sites used for nuclear weapons development and government sponsored nuclear energy research Low level radioactive waste LLW is the most volumetrically significant waste stream generated by the DOE cleanup program LLW is also generated through commercial activities such as nuclear power plant operations and medical treatments The laws and regulations related to the disposal of LLW in the United States have evolved over time and across agencies and states resulting in a complex regulatory structure DOE asked the National Academies of Sciences Engineering and Medicine to organize a workshop to discuss approaches for the management and disposition of LLW Participants explored the key physical chemical and radiological characteristics of low level waste that govern its safe and secure management and disposal in aggregate and in individual waste streams and how key characteristics of low level waste are incorporated into standards orders and regulations that govern the management and disposal of LLW in the United States and in other major waste producing countries This publication summarizes the presentations and discussions from the workshop

**Improving the Characterization and Treatment of Radioactive Wastes for the Department of Energy's Accelerated Site Cleanup Program** National Research Council, Division on Earth and Life Studies, Board on Radioactive Waste Management, Committee on Opportunities for Accelerating Characterization and Treatment of Waste at DOE Nuclear Weapons Sites, 2005-02-06 The Department of Energy's Office of Environmental Management EM directs the massive cleanup of more than 100 sites that were involved in the production of nuclear weapons materials during the Manhattan Project and the Cold War This report offers suggestions for more effectively characterizing

and treating the orphan and special case wastes that are part of EM's accelerated cleanup program. It identifies technical opportunities for EM to improve the program that will save time and money without compromising health and safety. The opportunities identified include making more effective use of existing facilities and capabilities for waste characterization, treatment, or disposal; eliminating self-imposed requirements that have no clear technical or safety basis; and investing in new technologies to improve existing treatment and characterization capabilities. For example, the report suggests that EM work with DOE classification officers to declassify to the extent possible classified materials declared as wastes. The report also suggests a new approach for treating the wastes that EM will leave in place after cleanup.
