Mathematical Foundations of Life Insurance Lewis C. Workman, 1982

Life Insurance Mathematics Hans U.

Gerber, 2013-03-09 Halley's Comet has been prominently displayed in many newspapers during the last few months. For the first time in 76 years it appeared this winter in the nocturnal sky. This is an appropriate occasion to clearly point out the fact that Sir Edmund Halley also constructed the world's first life table in 1693, thus creating the scientific foundation of life insurance. Halley's life table and its successors were viewed as deterministic laws, i.e., the number of deaths in any given group and year was considered to be a well-defined number that could be calculated by means of a life table. However, in reality, this number is random. Thus, any mathematical treatment of life insurance will have to rely more and more on probability theory. By sponsoring this monograph, the Swiss Association of Actuaries wishes to support the modern probabilistic view of life contingencies. We are fortunate that Professor Gerber, an internationally renowned expert, has assumed the task of writing the monograph. We thank the Springer Verlag and hope that this monograph will be the first in a successful series of actuarial texts. Zurich, March 1986. Hans Bihlmann, President, Swiss Association of Actuaries. Preface. Two major developments have influenced the environment of actuarial mathematics. One is the arrival of powerful and affordable computers; the once important problem of numerical calculation has become almost trivial in many instances.
