*Economic Analysis of the Irrigated Cotton Production Constraints in Sudan* Adam Elhag Ahmed Yassin, 2004

Sudan was traditionally one of the world's largest producers of long staple cotton and medium producer of medium staple cotton In the Sudan cotton has been the most important cash crop and foreign currency earner for the past 50 years During the seventies and up to late eighties cotton alone contributed between 45 and 65 percent of the total foreign currency earnings however its contribution dropped below 3% in 2001 In addition cotton is considered as a main source of income for about 13 percent of the total labor force In spite of the economic importance of cotton for the Sudan economy big fluctuations in cotton area production and yield occurred Gezira Scheme GS contributes about 60 % of the total cotton produced in Sudan The study answers the following research questions 1 What are the main driving factors and the reasons for the decrease of cotton production in the GS 2 Is the cotton yield variability among the tenants in the GS due to random variability or due to the tenants technical inefficiency or scheme management factors What are the main factors behind technical inefficiency 3 What are the economic losses as a result of cotton production variability in the GS and 4 If the tenants are free to choose what to produce what are the crop combinations they will select and how close are they to the current crop combination

**Farm-Level Modelling** Shailesh Shrestha, Andrew Barnes, Bouda Vosough Ahmadi, 2016-09-28

Agriculture is the product of a complex mixture of behavioural biophysical and market drivers Understanding how these factors interact to produce crops and livestock for food has been the focus of economic investigation for many years The advent of optimisation algorithms and the exponential growth in computing technology has allowed significant growth in mathematical modelling of the dynamics of agricultural systems The complexity of approaches has grown in parallel with the availability of data at increasingly finer resolutions Farm level models have been widely used in agricultural economic studies to understand how farmers and land owners respond to market and policy levers This book provides an in depth description of different methodologies and techniques currently used in farm level modelling While giving an overview of the theoretical grounding behind the models an applied approach is also used Case studies range from the application of modelling to policy reforms and the subsequent impacts on rural communities and food supply This book also provides descriptions of the use of farm level models in much wider fields such as aggregation and linking with sectoral models Its purpose is to show the reader the methods that have been employed to inform decision makers about how to improve the economic social and environmental goals required to achieve the aims of multidimensional policy
