Teaching Mathematics for the 21st Century Linda Huetinck, Sara N. Munshin, 2008

This third edition of *Teaching Mathematics for the 21st Century* continues to help teachers let the secret out to open up to their students the wonderful discoveries and challenges of the pattern making and problem solving aspects of a fascinating subject mathematics. The rationale remains the same to enable prospective and current teachers to access and use tools and strategies to effectively teach mathematics to contemporary students. Changing demographics, knowledge of how people learn, and technology all impact the way we educate our young people. This edition incorporates lessons and strategies from programs that have proven success in many types of classrooms. Many of these examples help students connect mathematics to real life situations and communicate their understanding of the underlying concepts. Although technology is constantly being upgraded, ways to increase student motivation through its application remains a goal. For example, since applets can enhance a lesson, whether the teacher uses a computer projector, a smart board, or has students work individually on computers, we have identified several sources of mathematics applets that can be correlated to various lessons. Research citations and summaries have been updated to reflect current information on teaching and learning. For future teachers

Connecting Mathematics and Science to Workplace Contexts Edward Britton, 1999-06-23

Engage students through real world curriculum. It's no accident that employers complain that newly minted graduates are out of touch with the realities of work demands. Too often there is a disconnect between what is taught in the classroom and what is demanded in the workplace, and students suffer the consequences. Mathematics and science curricula can play a critical role in solving this dilemma. In this comprehensive review of 23 exemplary curricula programs, the authors offer an easy-to-use guide for tying curriculum to workplace experiences, from a hematology laboratory to an agricultural setting to a soda bottling company. These programs illustrate concrete real life situations to which students can relate and derive motivation. Learn how to meet the goals of science, mathematics, and technology education. Meet national curriculum standards. Chart key characteristics of successful curricula. Connect curriculum to workplace contexts. Create your own curriculum materials. This book is a must for mathematics and science educators, curriculum developers, and supervisors and educators in school-to-work programs and vocational courses.
