Sharpening Everyday Mental/thinking Skills Through Mathematics Problem Solving And Beyond Alfred S Posamentier,Hans Humenberger,2024-01-22 Mathematics is a subject taught from kindergarten through to high school and yet it is the one subject that most adults are almost proud to admit to not having been very good at and therefore tend to avoid it where they can However one of the key factors in mathematics is its ability to enable us to solve everyday problems When we consider the worst case scenario of the situation it is analogous to solving a mathematical problem by considering extremes Or we might consider the best path to take from point A to point B where geometric relationships can be helpful This book is intended to demonstrate a variety of neglected aspects of mathematics in order to demonstrate the power and beauty of the field of mathematics beyond where most people students and teachers believe is possible The chapters of the book explore a multitude of topics unusual arithmetic calculations and shortcuts entertaining and instructional problem solving strategies unusual applications of algebra and how geometry allows us to better appreciate physical relationships Only a basic mathematical knowledge is needed to understand

these topics and problems however the book also demonstrates that armed with even this level of understanding our mathematical skills far exceed what we learned at school The final chapter is the most challenging and explores a curious problem solving technique
