Mathematical Logic A First Course:

A First Course in Mathematical Logic and Set Theory Michael L. O'Leary, 2015-09-14 A mathematical introduction to the theory and applications of logic and set theory with an emphasis on writing proofs Highlighting the applications and notations of basic mathematical concepts within the framework of logic and set theory A First Course in Mathematical Logic and Set Theory introduces how logic is used to prepare and structure proofs and solve more complex problems The book begins with propositional logic including two column proofs and truth table applications followed by first order logic which provides the structure for writing mathematical proofs Set theory is then introduced and serves as the basis for defining relations functions numbers mathematical induction ordinals and cardinals The book concludes with a primer on basic model theory with applications to abstract algebra A First Course in Mathematical Logic and Set Theory also includes Section exercises designed to show the interactions between topics and reinforce the presented ideas and concepts Numerous examples that illustrate theorems and employ basic concepts such as Euclid's lemma the Fibonacci sequence and unique factorization Coverage of important theorems including the well ordering theorem completeness theorem compactness theorem as well as the theorems of Löwenheim Skolem Burali Forti Hartogs Cantor Schröder Bernstein and König An excellent textbook for students studying the foundations of mathematics and mathematical proofs A First Course in Mathematical Logic and Set Theory is also appropriate for readers preparing for careers in mathematics education or computer science In addition the book is ideal for introductory courses on mathematical logic and or set theory and appropriate for upper undergraduate transition courses with rigorous mathematical reasoning involving algebra number theory or analysis

Mathematical Logic Joel W. Robbin, 1969 [First Course in Mathematical Logic](#) Patrick Suppes, Shirley A. Hill, 1964

A First Course in Logic Mark Verus Lawson, 2018-12-07 A First Course in Logic is an introduction to first order logic suitable for first and second year mathematicians and computer scientists There are three components to this course propositional logic Boolean algebras and predicate first order logic Logic is the basis of proofs in mathematics how do we know what we say is true and also of computer science how do I know this program will do what I think it will Surprisingly little mathematics is needed to learn and understand logic this course doesn't involve any calculus The real mathematical prerequisite is an ability to manipulate symbols in other words basic algebra Anyone who can write programs should have this ability *A First Course in Logic* Shawn Hedman, 2004-07-08 The ability to reason and think in a logical manner forms the basis of learning for most mathematics computer science philosophy and logic students Based on the author's teaching notes at the University of Maryland and aimed at a broad audience this text covers the fundamental topics in classical logic in an extremely clear thorough and accurate style that is accessible to all the above Covering propositional logic first order logic and second order logic as well as proof theory computability theory and model theory the text also contains numerous carefully graded exercises and is ideal for a first or refresher course **First Course in Mathematical Logic** Patrick

Suppes, Shirley A. Hill, 2002-01-01 Starting with symbolizing sentences and sentential connectives this work proceeds to the rules of logical inference and sentential derivation examines the concepts of truth and validity and presents a series of truth tables Subsequent topics include terms predicates and universal quantifiers universal specification and laws of identity axioms for addition and universal generalization 1964 edition Index

Introduction to Mathematical Logic, Fourth Edition Elliott Mendelson, 1997-06-01 The Fourth Edition of this long established text retains all the key features of the previous editions covering the basic topics of a solid first course in mathematical logic This edition includes an extensive appendix on second order logic a section on set theory with urelements and a section on the logic that results when we allow models with empty domains The text contains numerous exercises and an appendix furnishes answers to many of them Introduction to Mathematical Logic includes propositional logic first order logic first order number theory and the incompleteness and undecidability theorems of Gödel Rosser Church and Tarski axiomatic set theory theory of computability The study of mathematical logic axiomatic set theory and computability theory provides an understanding of the fundamental assumptions and proof techniques that form basis of mathematics Logic and computability theory have also become indispensable tools in theoretical computer science including artificial intelligence Introduction to Mathematical Logic covers these topics in a clear reader friendly style that will be valued by anyone working in computer science as well as lecturers and researchers in mathematics philosophy and related fields

Logic: a Brief Course Daniele Mundici, 2012-03-29 This short book geared towards undergraduate students of computer science and mathematics is specifically designed for a first course in mathematical logic A proof of Gödel's completeness theorem and its main consequences is given using Robinson's completeness theorem and Gödel's compactness theorem for propositional logic The reader will familiarize himself with many basic ideas and artifacts of mathematical logic a non ambiguous syntax logical equivalence and consequence relation the Davis Putnam procedure Tarski semantics Herbrand models the axioms of identity Skolem normal forms nonstandard models and interestingly enough proofs and refutations viewed as graphic objects The mathematical prerequisites are minimal the book is accessible to anybody having some familiarity with proofs by induction Many exercises on the relationship between natural language and formal proofs make the book also interesting to a wide range of students of philosophy and linguistics

Symbolic Logic Gary M. Hardegree, 1994 *Mathematical Logic: a First Course* Joel W. Robbin, 1969

A Course in Mathematical Logic J.L. Bell, M. Machover, 1977-01-01 A comprehensive one year graduate or advanced undergraduate course in mathematical logic and foundations of mathematics No previous knowledge of logic is required the book is suitable for self study Many exercises with hints are included

A Course on Mathematical Logic Shashi Mohan Srivastava, 2008-02-15 This book provides a distinctive well motivated introduction to mathematical logic It starts with the definition of first order languages proceeds through propositional logic completeness theorems and finally the two Incompleteness Theorems of Gödel

First Course in Mathematical Logic

Frederick Binford,1965 *Set Theory* Daniel W. Cunningham,2016-07-18 Set theory can be considered a unifying theory for mathematics This book covers the fundamentals of the subject Calculus: A Rigorous First Course Daniel J.

Velleman,2017-01-18 Designed for undergraduate mathematics majors this rigorous and rewarding treatment covers the usual topics of first year calculus limits derivatives integrals and infinite series Author Daniel J Velleman focuses on calculus as a tool for problem solving rather than the subject s theoretical foundations Stressing a fundamental understanding of the concepts of calculus instead of memorized procedures this volume teaches problem solving by reasoning not just calculation The goal of the text is an understanding of calculus that is deep enough to allow the student to not only find answers to problems but also achieve certainty of the answers correctness No background in calculus is necessary Prerequisites include proficiency in basic algebra and trigonometry and a concise review of both areas provides sufficient background Extensive problem material appears throughout the text and includes selected answers Complete solutions are available to instructors

A Course in Mathematical Logic Yu.I. Manin,2013-07-13 1 This book is above all addressed to mathematicians It is intended to be a textbook of mathematical logic on a sophisticated level presenting the reader with several of the most significant discoveries of the last ten or fifteen years These include the independence of the continuum hypothesis the Diophantine nature of enumerable sets the impossibility of finding an algorithmic solution for one or two old problems All the necessary preliminary material including predicate logic and the fundamentals of recursive function theory is presented systematically and with complete proofs We only assume that the reader is familiar with naive set theoretic arguments In this book mathematical logic is presented both as a part of mathematics and as the result of its self perception Thus the substance of the book consists of difficult proofs of subtle theorems and the spirit of the book consists of attempts to explain what these theorems say about the mathematical way of thought Foundational problems are for the most part passed over in silence Most likely logic is capable of justifying mathematics to no greater extent than biology is capable of justifying life 2 The first two chapters are devoted to predicate logic The presentation here is fairly standard except that semantics occupies a very dominant position truth is introduced before deducibility and models of speech in formal languages precede the systematic study of syntax

A First Course in Functional Analysis Martin Davis,2013-05-27 Designed for undergraduate mathematics majors this self contained exposition of Gelfand s proof of Wiener s theorem explores set theoretic preliminaries normed linear spaces and algebras functions on Banach spaces homomorphisms on normed linear spaces and more 1966 edition

Solutions to the Exercises in First Course in Mathematical Logic Frederick Binford,1965 A First Course in Geometry Edward T Walsh,2014-10-15 Suitable for college courses this introductory text covers the language of mathematics geometric sets of points separation and angles triangles parallel lines similarity polygons and area circles and space and coordinate geometry 1974 edition
