Abstract

Mathematics education faces complex challenges, ranging from low learning outcomes to disparities in access, requiring a multi-paradigm research approach. This article analyzes four research paradigms (positivistic, constructivist, pragmatic, and critical) and their implications for mathematics learning. The study employed a systematic literature review method by analyzing 25 selected sources from indexed international journals. The results show: (1) each paradigm provides unique contributions, with positivist excellence in program evaluation, constructivist excellence in concept development, pragmatic excellence in practical solutions, and critical excellence in addressing injustice; (2) integration of paradigms results in a more holistic approach; (3) the main challenge lies in adapting paradigms to local contexts. These findings recommend a pluralistic research approach that combines the strengths of various paradigms to enhance the relevance and impact of mathematics education research.

Keywords: Research paradigm, Mathematics education, Qualitative Research

INTRODUCTION

Mathematics education is a field that continues to evolve in line with the demands of the 21st century, where numeracy literacy, critical thinking, and creativity are essential competencies (Skovsmose, 2020). However, various challenges still hamper the effectiveness of mathematics learning, ranging from less innovative teaching methods to disparities in educational access (Boaler, 2016). Research paradigms in mathematics education play a crucial role in responding to these challenges, as they determine how a problem is studied, analyzed, and solved (Creswell & Poth, 2017).

One fundamental problem is the dominance of the positivistic paradigm, which prioritizes quantitative approaches and generalizations, often ignoring the social and cultural context of learning (Skovsmose, 2020). This has the potential to reduce the relevance of research findings to real-world classroom practice (Lerman, 2014). Furthermore, the lack of integration between theory and practice results in many research findings not being optimally implemented in education policy (Cai et al., 2017).

At the practical level, students often struggle to grasp abstract mathematical concepts, leading to low motivation and achievement (Mullis & Martin, 2022). TIMSS and PISA studies consistently show that many countries, including Indonesia, still fall below the international average in mathematics proficiency (Mullis & Martin, 2022). Factors such as teacher unpreparedness, a crowded curriculum, and a lack of problem-solving approaches exacerbate this situation (Asoy et al., 2022).

There is a significant gap between research findings and their implementation in the classroom. Many teachers struggle to access or apply research findings due to differing paradigms and limited resources (Goos, 2016). Furthermore, mathematics education research often does not involve teachers as collaborative partners, resulting in less applicable results (Cochran-Smith & Lytle, 2009). This highlights the need for a more participatory and contextual research approach.
