Semiconductor Interfaces And Microstructures:

Semiconductor Interfaces, Microstructures and Devices Zhe Chuan Feng, 1993-01-01 A semiconductor interface is the contact between the semiconductor itself and a metal. The interface is a site of change and it is imperative to ensure that the semiconducting material is sealed at this point to maintain its reliability. This book examines various aspects of interfaces showing how they can affect microstructures and devices such as infrared photodetectors as used in night sights and blue diode lasers. It presents various techniques for examining different types of semiconductor material and suggests future potential commercial applications for different semiconductor devices. Written by experts in their fields and focusing on metallic semiconductors Cadmium Telluride and related compounds this comprehensive overview of recent developments is an essential reference for those working in the semiconductor industry and provides a concise and comprehensive introduction to those new to the field.

Semiconductor Interfaces And Microstructures Zhe Chuan Feng, 1992-08-31 Recently there have been major achievements in the study of semiconductor interfaces and microstructures for different materials and structural systems. Progress has been made through various experimental technologies and theoretical methods. This book provides an up to date review on these advances and includes the following major subjects: IV-IV, III-V and II-VI semiconductors and metal semiconductor structures; new developments in growth methods; electric, optical, magnetic and structural characterization and properties; relative theories; electronic transport; phonons and interface modes; devices and applications. These materials are organized into four sections: General; III-V; II-VI and IV-IV which offer comprehensive information and help readers in following the new developments in the research frontiers of the above fields.

Raman Scattering on Emerging Semiconductors and Oxides Zhe Feng, 2024-09-16 Raman Scattering on Emerging Semiconductors and Oxides presents Raman scattering studies. It describes the key fundamental elements in applying Raman spectroscopies to various semiconductors and oxides without complicated and deep Raman theories. Across nine chapters it covers SiC and IV-IV semiconductors, III-V GaN and nitride semiconductors, III-V and II-VI semiconductors, ZnO based and GaO based semiconducting oxides, Graphene, ferroelectric oxides and other emerging materials, Wide bandgap semiconductors of SiC, GaN and ZnO and Ultra wide gap semiconductors of AlN, Ga₂O₃ and graphene. Key achievements from the author and collaborators in the above fields are referred to and cited with typical Raman spectral graphs and analyses. Written for engineers, scientists and academics this comprehensive book will be fundamental for newcomers in Raman spectroscopy. Zhe Chuan Feng has had an impressive career spanning many years of important work in engineering and tech including as a professor at the Graduate Institute of Photonics, establishing the Science Exploring Lab, joining Kennesaw State University as an adjunct professor part time and at the Department of Electrical and Computer Engineering, Southern Polytechnic College of Engineering and Engineering Technology. Currently he is focusing on materials research for LED, III nitrides, SiC, ZnO, other semiconductors, oxides and nanostructures and has devoted time to materials research and growth of III-V and II-VI.

compounds LED III nitrides SiC ZnO GaO and other semiconductors oxides Professor Feng has also edited and published multiple review books in his field alongside authoring scientific journal papers and conference proceeding papers He has organized symposiums and been an invited speaker at different international conferences and universities He has also served as a guest editor for special journal issues Physics and Applications of Semiconductor Microstructures Milan Jaros,1989 Textbook for third year undergraduate to first year graduate students in physics and microelectronics Outlines concepts concerning the description and applications of novel semiconductor microstructures such as quantum wells superlattices and heterojunction microdevices in general e g lasers transistors optical detectors and switches Annotation copyrighted by Book News Inc Portland OR *Heteroepitaxy of Semiconductors* John E. Ayers,2018-10-08 Heteroepitaxy has evolved rapidly in recent years With each new wave of material substrate combinations our understanding of how to control crystal growth becomes more refined Most books on the subject focus on a specific material or material family narrowly explaining the processes and techniques appropriate for each Surveying the principles common to all types of semiconductor materials *Heteroepitaxy of Semiconductors Theory Growth and Characterization* is the first comprehensive fundamental introduction to the field This book reflects our current understanding of nucleation growth modes relaxation of strained layers and dislocation dynamics without emphasizing any particular material Following an overview of the properties of semiconductors the author introduces the important heteroepitaxial growth methods and provides a survey of semiconductor crystal surfaces their structures and nucleation With this foundation the book provides in depth descriptions of mismatched heteroepitaxy and lattice strain relaxation various characterization tools used to monitor and evaluate the growth process and finally defect engineering approaches Numerous examples highlight the concepts while extensive micrographs schematics of experimental setups and graphs illustrate the discussion Serving as a solid starting point for this rapidly evolving area *Heteroepitaxy of Semiconductors Theory Growth and Characterization* makes the principles of heteroepitaxy easily accessible to anyone preparing to enter the field Delta-doping of Semiconductors E. F. Schubert,1996-03-14 This book is the first to give a comprehensive review of the theory fabrication characterisation and device applications of abrupt shallow and narrow doping profiles in semiconductors Such doping profiles are a key element in the development of modern semiconductor technology After an introductory chapter setting out the basic theoretical and experimental concepts involved the fabrication of abrupt and narrow doping profiles by several different techniques including epitaxial growth is discussed The techniques for characterising doping distributions are then presented followed by several chapters devoted to the inherent physical properties of narrow doping profiles The latter part of the book deals with specific devices The book will be of great interest to graduate students researchers and engineers in the fields of semiconductor physics and microelectronic engineering Beam Injection Assessment of Microstructures in Semiconductors Hajime Tomokage,Takashi Sekiguchi,2001 The characterisation of semiconductors is of key importance in preparing and applying semiconductors in industry The present

work deals with theoretical and experimental topics which are related to the assessment of microstructures in semiconductors by means of beam injection and related methods
