   The Semantics of Destructive Lisp Ian A. Mason,2000   The Semantics of Destructive Lisp Ian Mason,1987-04-01

   The Semantics of Destructive Lisp Ian Mason,1987-04-01 While the semantics of pure lisp is well understood the same cannot be said for the lisp that people actually use due to the presence of so called destructive operations in programs operations like RPLACA and RPLACD that destructively manipulate data Such destructive operations have caused considerable difficulty in bridging the gap between theory program verification and program transformation In this book Ian A Mason aims at squaring theory with practice by first developing a theory that respects practice and then improving practice within this theory Mason s theory is based on a new notion of memory structure that is adequate to model such destructive operations Within this framework he investigates various equivalence relations between expressions in first order lisp This fragment of lisp includes the destructive operations of RPLACA and RPLACD Mason then defines some important equivalence relations in lisp programs within this model theoretic framework Throughout the work Mason makes a distinction between intensional relations and extensional relations   **Foundations of Logic and Functional Programming** Mauro Boscarol,Luigia Carlucci Aiello,1988-04-27 This volume consists of some of the papers that were delivered during the workshop on Foundations of Logic and Functional Programming held in Trento Italy from December 15th to 19th 1986 The meeting centered on themes and trends in Functional Programming and in Logic Programming This book contains five papers contributed by the invited speakers and five selected contributions   **Formal Modeling: Actors; Open Systems, Biological Systems** Gul Agha,Olivier Danvy,José Meseguer,2011-10-30 This Festschrift volume published in honor of Carolyn Talcott on the occasion of her 70th birthday contains a collection of papers presented at a symposium held in Menlo Park California USA in November 2011 Carolyn Talcott is a leading researcher and mentor of international renown among computer scientists She has made key contributions to a number of areas of computer science including semantics and verification of progamming languages foundations of actor based systems middleware meta architectures and systems Maude and rewriting logic and computational biology The 21 papers presented are organized in topical sections named Essays on Carolyn Talcott actors and programming languages cyberphysical systems middleware and meta architectures formal methods and reasoning tools and computational biology   Situation Theory and Its Applications: Volume 3 Robin Cooper,Peter Aczel,Kuniaki Mukai,John Perry,1990 Situation theory is the result of an interdisciplinary effort to create a full fledged theory of information Created by scholars and scientists from cognitive science computer science and AI linguistics logic philosophy and mathematics it aims to provide a common set of tools for the analysis of phenomena from all these fields Unlike Shannon Weaver type theories of information which are purely quantitative theories situation theory aims at providing tools for the analysis of the specific content of a situation signal message data base statement or other information carrying situation The question addressed is not how much information is carried but what information is carried   **Languages,**

Compilers, Analysis - From Beautiful Theory to Useful Practice Dominic Orchard,Tomas Petricek,Jeremy Singer,2025-11-24 This Festschrift is dedicated to Alan Mycroft who formally retired from the University of Cambridge after almost 40 years Following a BA in Mathematics from the University of Cambridge in 1977 Alan took the Diploma in Computer Science in 1978 He then completed a PhD in Edinburgh in 1981 on Abstract Interpretation and Optimising Transformations for Applicative Programs under the supervision of Rod Burstall and Robin Milner After an EPSRC postdoctoral fellowship at Edinburgh and a research assistant position at Chalmers University he returned to the University of Cambridge in 1984 and remained there until his retirement in 2023 Alan is well known for pioneering contributions to programming language theory and applications covering both design and implementation His work ranges from compilation and optimisation techniques through semantics static analysis and type systems to parallel concurrent and dataflow programming He co created the Norcroft C compiler with Arthur Norman he co authored the book Java 8 in Action Lambdas Streams and Functional Style Programming and he co founded the Raspberry Pi Foundation a hugely successful initiative to develop programming skills and thinking for all ages In addition to his excellent research profile Alan has been an inspiring teacher mentor and collaborator always generous with encouragement and feedback The impact and scope of his career is reflected in the breadth of topics in this volume a fitting tribute to him   *The Functional Approach to Programming* Guy Cousineau,Michel Mauny,1998-10-29 A programming course should concentrate as much as possible on a program s logical structure and design rather than simply show how to write code The Functional Approach to Programming achieves this aim because logical concepts are evident and programs are transparent so can be written quickly and cleanly In this book the authors emphasise the notions of function and function application which relate programming to familiar concepts from mathematics and logic They introduce functional programming via examples but also explain what programs compute and how to reason about them They show how the ideas can be implemented in the Caml language a dialect of the ML family and give examples of how complex programs from a variety of areas such as arithmetic tree algorithms graph algorithms text parsing and geometry can be developed in close agreement with their specifications Many exercises and examples are included throughout the book solutions are also available   **Dispositional Logic and Commonsense Reasoning** Lotfi Asker Zadeh,1988   The SECD Microprocessor Brian T. Graham,1992-05-31 Very Good No Highlights or Markup all pages are intact   **COMPSTAT 2008** Paula Brito,2008-08-11 18th Symposium Held in Porto Portugal 2008   **The Second RIKEN International Symposium on Symbolic and Algebraic Computation by Computers** Nobuyuki Inada,Takashi S?ma,1985 This proceedings is based on research work on formula manipulation and computer algebra culminating in the design and construction of a formula manipulation machine at RIKEN known as the FLATS project   **Unification and Agreement** Michael Barlow,1988   **Programming Language Theory and Its Implementation** Michael J. The LFG Treatment of Discontinuity and the Double Infinitive Construction in Dutch Mark Johnson,Center for the Study of Language and Information (U.S.),1986   **On the Relation Between Default and Autoepistemic Logic** Kurt Konolige,1987 Default logic is a formal means of reasoning about defaults what normally is the case in the absence of contradicting information Autoepistemic logic on the other hand is meant to describe the consequences of reasoning about ignorance what must be true if a certain fact is not known Although the motivation and formal character of these two systems are different a closer analysis shows that they share a common trait which is the indexical nature of certain elements in the theory In this paper we compare the expressive power of the two systems First we give an effective translation of default logic into autoepistemic logic default theories can thus be embedded into autoepistemic logic We also present a more surprising result the reverse translation is also possible so that every set of sentences in autoepistemic logic can be effectively rewritten as a default theory The formal equivalence of these two differing systems is thus established This analysis gives an interpretive semantics to default logic and yields insight into the nature of defaults in autoepistemic reasoning
