Encyclopaedia of Mathematics Michiel Hazewinkel,2012-12-06 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques

Cognitive Techniques in Visual Data Interpretation Lidia Ogiela,2009-07-21 The extremely rapid progress of science dealing with the design of new computer systems and the development of intelligent algorithmic solutions for solving complex problems has become apparent also in the field of computational intelligence and cognitive informatics methods The progress of these new branches of informatics has only started a few years ago but they are already making a very significant contribution to the development of modern technologies and also forming the foundations for future research on building an artificial brain and systems imitating human thought processes We are already able to build robots with basic machine intelligence which can sometimes perform complex actions and also create by adapting to changing conditions of their surroundings This very impressive development of intelligent systems is manifested in the creation of robotic devices which use artificial intelligence algorithms in their operations moments when solving difficult problems or communicating with humans It is also evidenced by the introduction of new methods of reasoning about and interpreting objects or events surrounding the system One of the fields in which the need to deploy such modern solutions is obvious are cognitive vision systems used both in mobile robots and in computer systems which recognise or interpret the meaning of recorded signals or patterns

Sequential Pattern Recognition Pooyan Safari,2013 In recent years deep learning has opened a new research line in pattern recognition tasks It has been hypothesized that this kind of learning would capture more abstract patterns concealed in data It is motivated by the new findings both in biological aspects of the brain and hardware developments which have made the parallel processing possible Deep learning methods come along with the conventional algorithms for optimization and training make them efficient for variety of applications in signal processing and pattern recognition This thesis explores these novel techniques and their related algorithms It addresses and compares different attributes of these methods sketches in their possible advantages and disadvantages

Condition-based Maintenance and Machine Diagnostics J.H.

Williams,A. Davies,P.R. Drake,1994-07-31 Condition based monitoring is an accepted feature of many industries petro chemical power generation coal mining and steel making for instance In manufacturing its application has been somewhat muted This text attempts to present the fundamental justification for condition based maintenance together with enough analytic and practical guidance for its implementation There are chapters on the two dominant techniques of vibration and debris analysis Also basic diagnostic methods are given along with a presentation of the systems approach to condition monitoring A detailed case study shows the practical application of the techniques presented Finally future developments in the use of expert systems and AI techniques are highlighted Condition based Maintenance and Machine Diagnostics gives details of both off the shelf solutions and analytic diagnostic techniques to enable a bespoke solution to be developed It is suitable for senior undergraduates and postgraduates in the field of manufacturing and industrial engineering and it furnishes managers in industry with sufficient information to judge the usefulness of the techniques for their particular application
