Mathematics Michiel Hazewinkel, 2013-12-01 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all

parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia

published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten

volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are

survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used

The main requirement for these articles has been that they should give a reasonably complete up to date account of the

current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be

understandable to mathematics students in their first specialization years to graduates from other mathematical areas and

depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These

articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts

involved in the area in question They also contain background and motivation rather than precise statements of precise

theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of

article of medium length contains more detailed concrete problems results and techniques *Encyclopaedia of Mathematics*
