

CHEM 211 Organic Chemistry I with Laboratory

[See the course's website with ChemEd's ChemEd360 Page Link Manual \(includes details\)](#)

Course Description

In CHEM 211, laboratory students will investigate the reactivity of organic chemistry under standard conditions and a wide range of laboratory techniques and reagents.

Students will become familiar with the nomenclature and structure of organic functional group through reactions and instrumental analysis. General reactions including nucleophilic substitution, elimination, and carbonyl addition will be used to synthesize new compounds from starting materials.

Students will also gain a variety of instruments including IR (Infrared Spectroscopy), Mass Spectrometry and NMR (Nuclear Magnetic Resonance) spectroscopy. In addition the student will learn chromatography (column chromatography), distillation and recrystallization and other lab skills.

Students will gain the opportunity to work on their projects in the course of the lab, working with their partner and their instructor. Students will identify, synthesize, and purify compounds from physical property data (melting points, boiling points, IR, NMR, and refractive index) and will also synthesize compounds through their student and lab design. A synthetic synthesis is also done using chromatography. Lab safety is covered throughout the semester. The purpose of the experiment is to be studied in depth in synthesis and to use a few synthetic skills acquired experimentally. Also during their experiments, the student will be asked to use specific equipment that frequently requires care that the experiment is just their own laboratory work from organic synthesis.

Prerequisite: CHEM 111 or permission of the department.

Restrictions: Related with Physical Science

Semester: Fall, Spring, Summer

Units: 3.00
