Exp. 1 define the melting point of a substance. - it is the temperature at which a solid becomes a liquid.

Exp. 1 why should you always use a new capillary tube when performing a second melting point determination on your sample? - to keep the sample from getting impurities

Exp. 1 why is it necessary to allow the Mel-Temp to cool before performing a second melting point determination? - a rapid temperature increase on the substance being tested will give a melting point range that is too high.

Exp. 1 in the experiment you used only 2-3 mm of sample in the melting point tube. what disadvantage is associated with using too much material? - if there is too much material, the melting point range is affected and changed. it would be broader than expected

Exp. 1 should you use the same melting point apparatus for all melting point measurements or is it okay to use a different one for each measurement? explain. - in the laboratory, all the Mel-Temp apparatuses were the same, so as long as they were cool enough to use, it is alright to use different ones.

Exp. 1 the Mel-Temp method is generally not useful for determining the melting point of inorganic compounds. explain why. - inorganic compounds have extremely high melting points. they have strong intermolecular forces, causing them to have very high melting points. the Mel-Temp equipment would not be able to supply enough temperature to force the inorganic compounds to melt.

Exp. 2 dimethylsulfoxide (DMSO, bp 189 degrees celsius) is an excellent organic solvent, but is not routinely employed in crystallization. explain why this might be - in can dissolve substances extremely well. however, it can also be potentially dangerous to work with as it is slightly toxic

Exp. 2 if you perform a recrystallization on 435 mg of impure benzoic acid and recover 360 mg of crystals, what is the percent recovery? -  $360/435 \times 100 = 82.75\%$

Exp. 2 what will happen if the centrifuge is not properly balanced? - if a centrifuge is not properly balanced, it can injure you and ruin the centrifuge as well. they operate at high speeds and unbalanced can result in the sample container breakage, which can be potentially harmful depending on the sample type.

Exp. 2 list some advantages as well as disadvantages to using the Craig tube crystallization technique - the Craig tube method is good for relatively small amounts of material (10-100mg). it also provides a better percent recovery. however, it does not work with large amounts of material.

Exp. 2 what was the purpose of using activated charcoal in this experiment? did you notice any differences before and after the addition of the activated charcoal? - activated charcoal works to remove colored impurities by allowing the colored molecules to stick to the surface of the activated charcoal, which is also a form of
