

NATIONAL GEOGRAPHIC VIDEO

THE *NEW* CHIMPANZEES

Enter the unknown world of
chimps in the wild.

National Geographic New Chimpanzees 1995

Kirsten Anderson, Jayne Wilkins

National Geographic New Chimpanzees 1995:

The First Idea Stanley I Greenspan, Stuart Shanker, 2004-08-03 A radical and brilliantly argued new theory about the fundamental origins of human intelligence culture and society

Shooting in the Wild Chris Palmer, 2010-05-11 Wildlife and nature films are a hugely popular entertainment genre networks such as Animal Planet and Discovery are stars in the cable television universe viewers flock to IMAX theaters to see jaw dropping footage from the wild and the venerable BBC still scores triumphs with series such as Planet Earth As cinematic technology brings ever more breathtaking images to the screen and as our direct contact with nature diminishes an ever expanding audience craves the indirect experience of wild nature that these films provide But this success has a dark side as Chris Palmer reveals in his authoritative and engrossing report on the wildlife film business A veteran producer and film educator Palmer looks past the headlines about TV host Steve Irwin s death by stingray and filmmaker Timothy Treadwell falling prey to his beloved grizzlies to uncover a more pervasive and troubling trend toward sensationalism extreme risk taking and even abuse in wildlife films He tracks the roots of this trend to the early days of the genre and he profiles a new breed of skilled ethical filmmakers whose work enlightens as well as entertains and who represent the future that Palmer envisions for the industry he loves

Wildlife Films Derek Bousé, 2011-11-29 If as many argue movies and television have become Western culture s premier storytelling media so too have they become for most members of society the primary source of encounters with the natural world particularly wild animals The television fare offered nightly by national and cable networks such as PBS and the Discovery Channel provides millions of viewers with their only experience of the wilderness and its inhabitants The very films that so many viewers take as accurate portrayals of wildlife however have evolved primarily as a form of entertainment following the established codes and conventions of narrative exposition The result has been not the representation of nature but its wholesale reconstruction and reconfiguration according to film and television conventions audience expectations and the demands of competition in the media marketplace *Wildlife Films* traces the genealogy of the nature film from its origins as the animal locomotion studies that mark the very beginnings of motion pictures themselves to the founding of the Animal Planet cable channel that boasts all animals all the time The narrative and thematic elements that unite wildlife films as a genre have their roots not in the documentary film tradition but in the older traditions of oral and written animal fables as reflections of human society Derek Bous contends that classic wildlife films often portray animal protagonists living in families modeled on an ideal of the human nuclear family and working in communities that resemble an ideal of bucolic human society In these stories presented as documentaries animals are motivated by human emotions and conduct relationships according to human customs This imposition of culturally satisfying narrative patterns upon the lives of animals has not only led to the misrepresentation of the natural world it has promoted the notion that our values our moral vision our models of society and family structure derive from nature rather than being cultural formations

Human Morality and Sociality Henrik Hogh-Olesen, Christophe

Boesch, Leda Cosmides, 2009-12-09 Human nature is enigmatic Are we cruel selfish creatures or good merciful Samaritans This book takes you on a journey into the complexities of human mind and kind from altruism sharing and large scale cooperation to cheating distrust and warfare What are the building blocks of morality and sociality Featuring contributions from leading researchers such as Christophe Boesch Leda Cosmides and John Tooby Azar Gat Dennis Krebs Ara Norenzayan and Frans B M de Waal this fascinating interdisciplinary reader draws on evolutionary and comparative perspectives and is essential reading for any students interested in the unique characteristics that define humanity and society **Primates**

Britannica Educational Publishing, 2010-10-01 From lemurs to apes to human beings primates are unique among mammals for example our brains are large compared to our size Our complex interactions intricate social structures and extensive range of emotions allow us to adapt and thrive in diverse habitats around the globe In this volume readers are invited into the many domains of these extraordinary creatures to discover the incredible diversity of primate species Readers will also learn about the long history of human beings from our earliest ancestors the australopiths to the homo sapiens of today

The Biohistory of Feminism Carol Blakney, Abel Alves, 2026-02-02 The Biohistory of Feminism is a multilayered project that incorporates evolutionary biology to argue that behaviors labelled feminist by human cultures are already found in nature and that there is no one path to being female On a planet where asexual reproduction dominates intersex and parthenogenesis exist and eusocial females contribute to their colonies without reproducing being female goes beyond motherhood stereotypes dear to those who attempt to perpetuate a universal idea of male dominance in human history Feminism exists naturally as a series of efforts to express oneself in a multiplicity of ways freely chosen including the attainment of alpha status as a social animal managing resources and forming alliances Elephant matriarchs and alpha female bonobos were there among social animals before the appearance of human monarchs like Wu Zetian and contemporary politicians like Angela Merkel and cultural leaders like Wangari Maathai Female dolphins and chimpanzees taught cultural traditions before the intellectual achievements of literary figures like Sor Juana In s de la Cruz and scientists like Jane Goodall The diversity of female expression in nature is natural **BSCS Biology**, 1997 *Living with Cannibals*

and Other Women's Adventures Michele B. Slung, 2000 Slung showcases the inspiring pulse pounding stories of adventurous women from the 19th century to the present These accounts have been culled from the National Geographic Society's vast 111 year old collection of first person narratives by women explorers 30 photos illustrations line drawings *Jane Goodall*

Jennifer Lindsey, Jane Goodall, Jane Goodall Institute, 1999-11-15 On the occasion of Goodall's 40th anniversary of groundbreaking research with the chimpanzees of Gombe this beautifully illustrated volume traces her work from its singular beginnings to the Jane Goodall Institute's present day international activities 65 full color and 30 duotone photos Reports of the National Center for Science Education, 2005 **Human Characteristics** Henrik Høgh-Olesen, Jan

Tønnesvang, Preben Bertelsen, 2009 Every once in a while we have to reconsider the perennial questions concerning human

nature What are the special human behaviours social practices and psychological structures that makes us particularly human The field of evolution psychology and cognitive science is the most expanding inter disciplinary area for the time being uniting different sciences under the same evolutionary paradigm and keeping them occupied by the same eternal questions stated above Relevant data and theoretical considerations are piling up but an overview is needed To facilitate this a large inter disciplinary conference entitled Human Mind Human Kind was held at University of Aarhus Denmark More than 100 experts presented their latest research and after careful selection 20 of these contributions have found their way to this volume The studies fall into three well defined sections Evolution and Cognition Comparative and Developmental Perspectives Human Sociality Morality Religiosity Human Sexuality and Mating Strategies Specifying the differences between our own species and the rest of the animal world always provokes debate But these demarcations simply have to be drawn once and again They focus attention and stimulate research exactly because they provoke and challenge other researchers to take up the glove and prove us wrong
